About Us

Choosing the right food processing equipment is imperative to scaling up performance of companies engaged in the food and hospitality sector. We, Rajeshwari Engineering Works, as a manufacturer, are here to present a broad gamut of high performance machinery to meet needs of such businesses. The entire line of machines we offer, including Automatic Suction Pulverizer, Ribbon Blender, Supari Bolder, etc., is designed keeping two most important things in mind; one being operator safety and the other is hygienic processing of various foods. Thus, heavy duty motors and sturdy components are used in all our machine models so that buyers purchasing these can get safe and hassle free service for many years. However, to meet service related needs of buyers, we also provide professional Repair Service on our range of Spice Pulverizer, Supari Bolder, and other machines. We serve nationwide as a service provider, also promising quick delivery of bulk product orders.

Measuring quality time to time, on all operations and across business wings and departments on an ongoing basis is our success mantra. We practice cost reduction techniques via minimum waste generation but do not try to generate company profits by compromising on quality of our machines. We always ensure to build enduring partnerships that stem from our quality and ethical manufacturing practices.

We, Rajeshwari Engineering Works, offer industrial Food Processing Machinery to clients who want to remain profitable and proficient in the food production business. Having well managed assets in Indore, Madhya Pradesh India, including a reliable setup and competent manpower, our company specializes in offering Spice Pulverizer, Ribbon Blender, etc., of various models and types. We are passionate about building efficient machines conforming with the best of international technology, which is well reflected in our designed range. Not just products, our after care services are equally outstanding and we are equipped to repair any type of machines at extremely nominal rates.
