

Roof Forming Machine Applications:

Roof forming machines are widely used in roof construction and other allied building construction works. They cover applications like garden roof, factory roof, exhibition center, hotel and villa roof etc.

Advantages of Roof Forming Machine:

- Anti-rust roller: Plated with 0.05mm hard chrome & CNC machine tooled.
- Heat treatment: Cutting frame heat treatment to eliminate the steel stress and to avoid deformation.
- Cutter blade: Cr12 mould steel and quenched treatment, longer working life.
- High precision: Rollers shafts are tooled by grinding machine at least twice. CNC processed rollers to ensure performance & precision.
- People originate: Innovated Mitsubishi PLC with touch screen. User friendly man-machine interaction.
- Quality services: Technicians are provided at your site to install the machine, and to train your workers.
- Certificate: ISO 9001 and CE
