

MULTIMAT

Bio-X are the importer of the original Multimat from Sterylab, Italy.

In the recent past years, the problem of the infections acquired within the hospitals, the so called “hospital infections” (HI) or “medical care related infection”, has arisen as one the most prominent issue in the field of infection control.

Several different factors have influenced this increase: The appearance of multidrug resistant micro organisms and the extended use of invasive medical procedure for the diagnosis and treatment of patients are among the most important.

FEATURE:

Size : 60 x 115 cm

Packing : 5 pcs/ box

Colour : Blue

MULTIMAT can be placed down on the floor, even under the open side door.

Blue coloured, MULTIMAT has an adhesive mixed with a special antimicrobial & antifungal agent, Benzoisothiazolone – 3- one. Its antimicrobial action destroys pathogens carried by the dirt and debris (up to 100 million bacteria per gram).

MULTIMAT® demonstrated a high capability to reduce the bacterial load for a large spectrum of bacteria involved in the aetiology of HI. The results obtained in this in vitro study suggest that MULTIMAT® is a very useful tool to reduce the load of pathogenic micro organisms in all the locations where a decreased presence of bacteria and fungi is required to maintain the diffusion of “environmental borne” infections under control.
