

HEATING MANTLE (LI-HM-30)

APPLICATION :

Heating Mantle is used to uniformly heat various lab and glassware vessels. This type of laboratory heating mantle is a good alternative to heating baths and even great for those hard-to-fit flasks and funnels.

FEATURES :

- Flexible fabric types incorporate a flexible and insulated heating device which allows you to place your containers directly on the heating element without substantially increasing the risk of the glassware shattering.
- Available with a wide variety of shape, size, wattage, and temperature control options.
- Withstands temperature upto 350°C.
- Body of the mantle is spun one piece from MS duly powder coated.
- All heating mantles made from glass yarn are lagged with special grade mineral wool.
- Temperature can be controlled with energy regulator.
