

Perfect
Shot Blasting Company

PERFECT SHOT BLASTING

THE PERFECT SHOT BLASTING INTRODUCE 4 WHEEL ROLLER CONVEYOR SHOT BLASTING MACHINE

Roller Conveyor Shot Blasting Machine 4 Wheel is suitable for shot blasting of steel structure like angles, channels, round, beam and other items. Shot blasting machine has shown operating benefits that includes increase production without adding man power elimination of acid pickling, disposal of acid waste. Shot Blasting is faster, cheaper and flexible. Shot blasting surface if painted properly last much longer.

PERFECT SHOT BLASTING

Rotary Barrel Type Machine

PERFECT SHOT BLASTING

ROTARY BARREL TYPE SHOT BLASTING MACHINE

PERFECT SHOT BLASTING has a range of Airless Shot Blasting Machine Rotary Type varying according to the job size for the wide variety of work pieces from small to medium to generate large production output in terms of surface preparation. For removal and cleaning of sand casting, rust, forging, and burrs from all kinds of material and work pieces. This type of blast machine is economical and minimal maintenance.

PERFECT SHOT BLASTING

Blast Room

PERFECT SHOT BLASTING BLAST ROOM

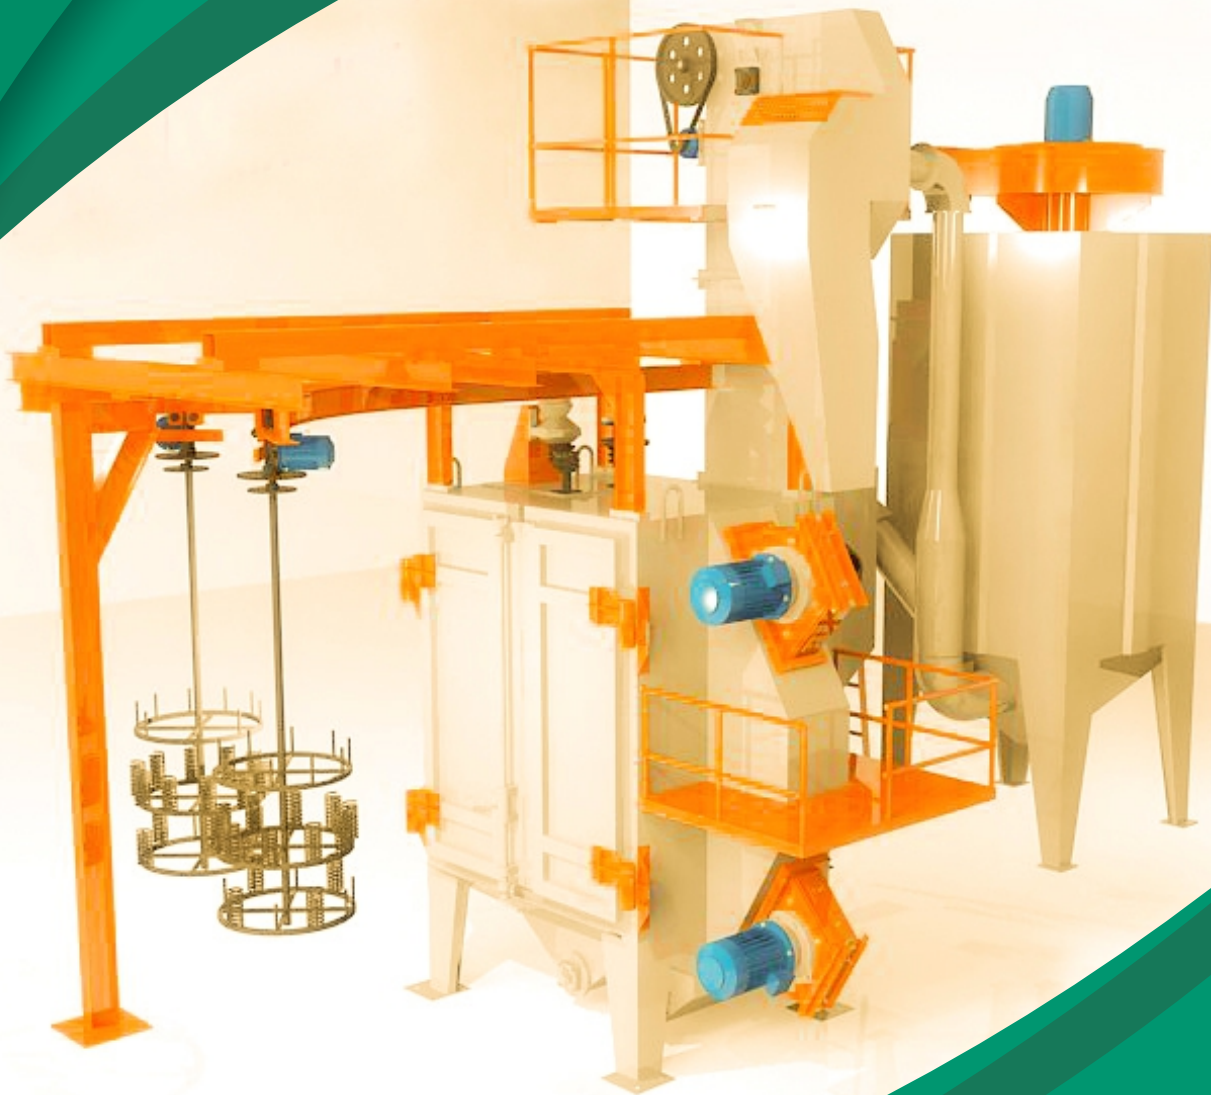

Perfect Shot Blasting has Introduced Blast rooms are used for big components or components where automatic blasting would be too expensive. In combination with nozzle manipulators installed in the blast room, surfaces can be automatically processed and areas that are hard to access can be blasted manually. Thus, the flexibility is maintained while reducing the number of blasters needed and the dirty surface of any work place can be easily cleaned by a mixture of abrasive and high pressure compressed air that is being directed at the work place by blast nozzle. Blast room equipment is used in a wide variety of industries that require surface preparation prior to the application of a protective coating/painting/corrosion removal/surface finishing. The blast room contains the abrasive being shot at the work piece, as well providing lighting & ventilation for the operator's safety. The main feature of an blast room is that the operator is inside the room during the blasting process. A protective suit and a helmet protect the operator from abrasive impact, and a fresh air supply provides sufficient ventilation through the blaster's airfed helmet. A dust collection system provides visibility; recovery floor sections convey the spent abrasive to an abrasive cleaning system which returns only good abrasive to the blast machine. Our sand/shot blasting rooms in various ranges and can customize them according to customer specifications. full floor reclaim system utilizes multiple screws assy to crease a fully automatic abrasive reclaim system.

HANGER TYPE SHOT BLASTING MACHINE

Perfect Shot Blasting Hanger Type Shot blasting machines are specially designed for blasting various components e.g. large / medium / small castings, forging parts, fabricated steel products, transformers, automobile parts, alloys wheels, bicycles, gear parts, axles and tool bits. These components are hung on the hook of a hoist and are controlled manually by the operator through the overhead conveyor outside the machine by means of an ordinary push-button panel. Once the hoist is at its working position, all its motors are driven by the cycle program which avoids any misuses and control the movements of components during the blasting operation. The blasting wheels are fitted on a cabin side, while the movement of the hook rotates. The surface of the work piece is thus evenly blasted from all angles and even difficult to reach areas are optimally treated.

PERFECT SHOT BLASTING

PIPE CLEANING SHOT BLASTING MACHINE

Pipe / Tube / Rod Cleaning Machine

PERFECT DIABOLA TYPE SHOT BLASTING MACHINE

Operation

By means of lifting tools or other conveyors the tubes will be placed on the diabola rollers and arrive at the blast machine. At that place they activate the signal threshold situated in front of the inlet sluice in order to start the automatic abrasives supply to the running high performance turbines. Through this, it is ensured that the blasting process only starts if there are work pieces in the blasting area.

After the blasting process the abrasives situated on the tubes falls into a hopper and is led back to the abrasives circulation. Powerful ventilators will blow abrasives remaining inside the tubes away.

The abrasives will be cleaned and kept in circulation for continuous use. Via the abrasives dosing device the cleaned abrasives, coming from the abrasives silo, arrives at the high performance turbines

A ventilator generates the necessary low-pressure that is necessary for a dust-free operation of the unit.

PERFECT SHOT BLASTING

PERFECT PLATE CLEANING MACHINES INTRODUCE

Perfect Plate shot blasting machine are suitable for cleaning steel plates, HR Plate. Wheel blast cabinet has shown operating benefits that includes increase production without adding man power, elimination of acid pickling, disposal of acid waste. Shot Blasting has proved faster, cheaper and much more flexible. Shot blasting surface if painted properly last much longer.

The machine is available in various models and special to suit your requirements.

STONE SAND BLASTING MACHINE

PERFECT STONE TEXTURING MACHINE

PERFECT SHOT BLASTING has introduced Stone Finishing cum Texturing Machine based on latest Italian Technology. The Machine houses multiple Blast Wheel Stations for throwing Shots on the Stone Slab to be finished / textured. These Wheels are specially designed for Stone Finishing application. The Stone Slabs are moved on Special Conveyor of the Machine. This conveyor carry's Stone Slabs into work cabinet for processing Stone Slabs. The desired Texture / Finishing can be obtained by varying speed of Conveyor / speed of Blast Wheel / size of Shots etc. Specially designed blanks can be used on Stone to obtain special effect on the surface of the Stone. These Machine can be inlined integrated with various other Stone Treatment Processes like heating / cleaning of Stone as per the clients requirement. The loading and unloading system for Stone Slab can also be integrated with Machine as per customer requirement.

Stone and ceramic Blasting Machine are used for making rough surface of paver blocks, glaze tiles, marbles, granites, for making antis kids and safe for walking. The stone and ceramic blast machine comprises continues rubber belt type, where the job is loaded on inlet conveyor and shot blasting tiles with antiskid effect are unloaded outlet side. More that many machines are in operation used by paver block, marble tiles, granite tiles and other ceramic and construction industries.

SUCTION BLAST MACHINE

SWING TABLE MACHINE 900

PERFECT SHOT BLASTING

SWING TABLE SINGLE DOOR/ DOUBLE DOOR 36 INCH/ (DIA 900MM) (CAPACITY OF TABLE JOB 350 KG.)

In a swing table type shot blasting machine, the work table which rotates work beneath the blast stream, swings out as the door is opened. Making full table area readily accessible and ready for loading and unloading, additional second door can be provided to increase the production.

SWING TABLE SINGLE DOOR/ DOUBLE DOOR 48 INCH/ DIA (1200MM) (CAPACITY OF TABLE JOB 800 KG.)

The most popular table shot blasting machine suitable for cleaning motor bodies, pump casing, oil engine parts, forgings. Many customer's use it for surface preparation prior to rubberizing and powder coating. Machines fitted with RLM Wheel, Soundabrator to muffle the noise, nihard table top, bottom perforated plate made of manganese steel which gives long life to the equipments.

A pit less design eliminates costly pit design; adequate work height clearance handles the wide range of work. The machine is available in two models 24 inches (600 mm) or 48 inches (1200 mm) work height clearance in height.

SWING TABLE SINGLE DOOR/ DOUBLE DOOR 72 INCH/ DIA (1800 MM) (CAPACITY OF TABLE JOB 2300 KG.)

Swing Table Shot Blasting Machine provides the big advantage, eliminates costly pit constructions, machine can be shifted from one location to another, can handle wide range of jobs. Driven by 25 hp RLM Wheel with Soundabrator. Swing Table Shot Blasting Machine is suitable for cleaning heavy casting like machine tool body, pump casing, fabricated frames etc.

PERFECT SHOT BLASTING

TUMBLAST SHOT BLASTING MACHINE 27 x 36

PERFECT SHOT BLASTING

TUMBLAST TYPE MACHINE 20 X 27

The PERFECT SHOT BLASTING INTRODUCE TUMBLAST MACHINE 20 X 27

The rugged shot blasting machine increase production improves quality and reduces costs, faster & better shot blasting leads to faster machining, saving of power, cutting tool cost, reduces rejections. The Tumbblast Machine 20 x 27 IS fitted with endless rubber conveyor belt gives you gentle turning of the parts to be shot blasted. The shot blasting is suitable for foundry, forging, aluminium deburring, surface preparation. More than many Tumbblast machines are in operation for various application in India & Abroad.

**TUMBLAST TYPE
20 X 27**

TUMBLAST TYPE MACHINE 27 X 36

The PERFECT SHOT BLASTING INTRODUCE TUMBLAST MACHINE 27 X 36

Tumbblast Type Shot Blasting Machine suitable for Cleaning, Forging, Iron, SG Iron Casting, Automotive Component, Fasteners, Tool, suitable for surface preparation for Railway and Power Transmission Casting. Many Spring manufacturer are using for auto components. The Tumbblast Machine can be supplied with auto loading equipment to further improve productivity as illustrated.
