

ProAir

WATER SEPARATORS

ADVANTAGES :

- 99% efficiency
- Removes rust & Pipeline scale etc.
- Proven Design
- High Efficiency
- Cost Effective
- High Flow Rates
- Practically negligible maintenance
- Very Low Differential Pressure
- Automatic Drain

SALIENT FEATURES :

- Externally and Internally powder coated for maximum corrosion Protection.
- Lightweight diecast aluminium housings with 10 mm to 80 mm (3/8" to 3" BSPF) end connection.
- Can be available with Autodrain / Manual Drain / Externally

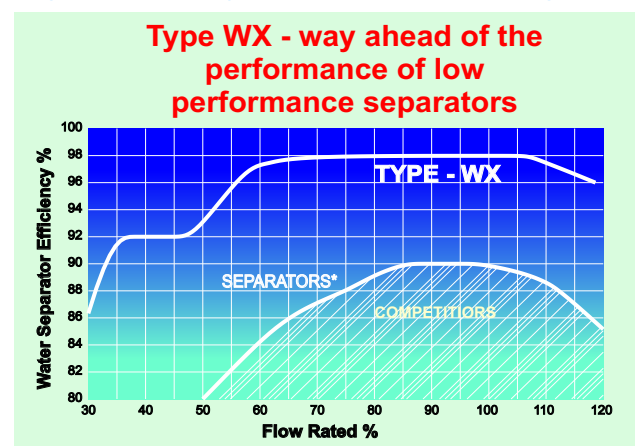

Removal of excessive contamination from compressed air and gas systems.

Bulk water exists in all compressed air systems causes problems-corrosion of piping, permanent damage to valves, cylinders, pneumatic tools, machinery and reducing the effectiveness of aftercoolers / heat exchangers.

Traditionally, separators have been of low technology design and possess variable operating performance characteristics. Now, we are pleased to introduce a new range of, well proven and tested separators with high efficiency performance characteristic over a wide range of duties. It combines the proven techniques of Centrifugal Action and Impingement Separation principles to remove large quantities of excessive liquid contamination. Over 99% of bulk water can be easily removed.

Typical applications include water separation down stream of aftercoolers and air receivers, in refrigerant dryers and at strategic points in large scale pipework installations and other Liquid/gas Separation duties

ProAir water separator has very high efficiency across its flow range.

Where the sheer volume of contamination poses a real problem. For installation where excessive free liquid contamination is a problem, choose **ProAir** - Water Separator.

TECHNICAL SPECIFICATION

WX 35 to WX 318

Maximum operating Pressure :
16 Kg/cm²g (232 psig)

Maximum recommended Operating
Temperature : 65°C (149°F)

Minimum recommended Operating
Temperature : 3°C (37.4°F)

Typical pressure differential at rated
flow : 25mbar - 60mbar (0.35 - 0.9 psi)

WX 742 - WX 1695

MODEL	FLOW RATES @7 Kg./Cm ² g (100 psig)		PIPE SIZE	DIMENSIONS (MM)				WEIGHT Kgs.
	scfm	Nm ³ /hr		A	B	C	D
