Direction For Use

Always clean the surface
before application to remove
any loose particles.

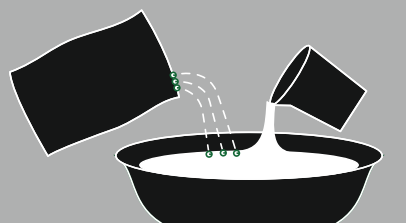

Ensure that the surface is solid
(hard and rigid) for the given
application and free from
voids holes and cracks.

Ensure surface is well
saturated before application.

Use 2.5 parts of Block
Jointing to 1 part water
(measured by volume and
mix to a smooth, workable,
stiff paste.)

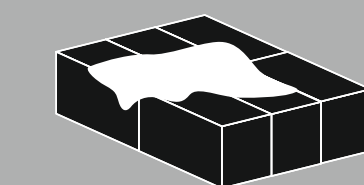

Always powder to
water.

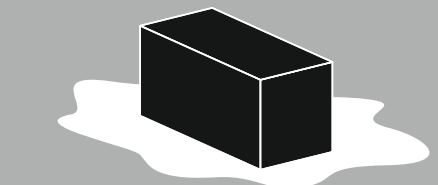

Allow the mix to stand for
2-8 min for the paste to
mature.

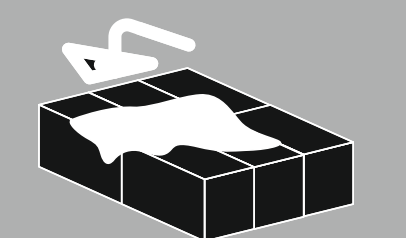

Do not add water to the
already mix slurry to extend
the pot life.

Put well mixed Block
Jointing on the block with help
of trowel, spread mortar
uniformly on the unit for a min
4mm bed thickness.

Firmly place the block with
slight shear to ensure good
transfer & bonding.

Block Jointing to be
applied on block and
on column for good
bonding of the joints.
