Anaerobic Septic Tanks for medium and large commercial places

World over there is now recognition that decentralized wastewater treatment is a better alternative to a centralized wastewater treatment system from the angle of investment, energy consumption and efficiency. There are many areas within cities, towns and villages that are impossible to cover through centralized wastewater treatment system. It has, therefore, become imperative to evolve decentralized wastewater treatment systems that take care of proper treatment and disposal of waste water.

In line with our innovative past, we now bring to you Sintex septic tanks that are compact and can be used in a decentralized manner anywhere for basic treatment of waste water.

Sintex Septic Tank is specially designed for the anaerobic digestion in which bacteria can treat waste under most favourable conditions. The process effectively prevents rapid accumulation of sludge and suspended solids from passing through the system untreated. With innovative engineering design of the inlet-outlet, short circuit of wastewater is prevented to ensure long enough retention time for effective treatment. Thus the effluent does not contain any solids or scum that could clog up pipelines.

Advantages of Sintex Anaerobic Septic Tanks

- 100% eco friendly
- Rust proof, Leak proof
- Durable, Light weight, Easy to install
- Excellent performance through massive reduction of BOD

Installation Instructions:

- Please refer to separate installation instruction available from us
