*An Art of Agriculture...*

Hybrid Vegetable Seeds Producer

## About Our Organization

FARMSON BIOTECH PVT LTD is an established in the year 2015, is an agricultural company that specializes in dealing with Vegetable Seed Production, Seeds Export. Also, we are the expert advisories of Permaculture. Every season farmer decides about their farming method, which seeds to plant, the market for their crop, production, etc. These are like the life span of farming and a wide reach area to cover, and so we took keen interest to their needs and with that phenomenon we started production of true hybrid seeds. Our seeds are capable of higher yield, Biotic-Abiotic stress, stand ability, and reliability of long-distance transportation as an established and pioneer agribusiness firm FARMSON BIOTECH PVT LTD has exported seeds in the USA, UK, Middle East, South Africa, Turkey, Iran, Portugal, Spain, Mauritius, Caribbean country, Bangladesh, and many more countries. We are having our quality checking lab where Germination, Moisture, Vigour, Physical purity analysis is done. Ensuring that every seed provides good fertility & multiplies the income of farmers. We are dealing in Customization of plant breeding and seeds production as per customer requirement. We outlined the production of seeds & customization as the need of a buyer.

## Vision

To be an Agri magnet that will transform agriculture into a tremendous market.

## Mission

Provide quality seeds and services

We shall provide solutions and knowledge for farming

Deliberately produce and market for crops in floriculture, horticulture, farming, and agriculture

## FB-ABHIONE F1

Semi Determinate high vigour plant habit hybrid  
Oval shape average fruit weight 110-120 Gm.  
Glossy deep red colour very firm fruit Its tolerant  
to BW and TLC tolerance variety High yield  
saladette variety and excellent for long distant  
transportation

## FB-KING F1

Semi Determinate Plant type hybrid Blocky  
shape fruit weight around 120-140Gm.  
Excellent firmness of fruit saladette variety  
and excellent for long distant transportation  
It's tolerant to TLCV and bacterial wilt

## FB-MADHAV F1

Semi Determinate plant habit hybrid Round  
shape uniform colour green to red fruit, Fruit  
bearing 5 to 8 in cluster with per fruit weight  
110-130 Gm. Fruit is firm and suitable for long  
distant transportation Tolerance to Toclv, Tomv,  
Bacterial Spot, Verticillium Wilt, Fusarium Wilt

# F1 HY. TOMATO

## FB- RASHIKA F1

Semi indeterminate high plant vigour hybrid  
Very uniform Fruit colour is Attractive deep red  
and glossy High yield potential Oval shape  
fruits weight 90-110 Gm It is characterized by  
good fruits setting in summer Good heat set &  
Tolerance to TY LCV

## FB-JAMBO F1

Determinate plant habit hybrid & Vigorous with  
medium foliage cove Cluster Bearing Ripe fruits  
are attractive deep red & glossy Flat round shape  
uniform Size fruit weight average 140-180 Gm.  
High yield Potential variety harvesting start 50-55  
DAT as well Tolerance to TYLCV also Suitable in  
Heat and cold Climate

# F1 HY. CHERRY TOMATO

## FB-RED PEARL (ROUND) F1

Early determinate sweet red cherry tomato hybrid  
Compact plants habit variety Globe shaped fruit  
weight around 20–25 gm Fruit harvesting start  
60 to 65 DAP Bright red color equal size fruit till  
the end. Thick bark, plump, and delicious to eat,  
with good keeping quality

## FB-RED BULLET (OVAL) F1

Determinate plant habit hybrid & Vigorous with  
medium foliage cove Cluster Bearing Ripe  
fruits are attractive deep red & glossy Flat round  
shape uniform Size fruit weight average 20-25  
Gm. High yield Potential variety harvesting start  
50-55 DAT as well Tolerance to TYLCV also  
Suitable in Heat and cold Climate

# F1 HY. CHILI / PEPPER

## FB-ARK F1

Plant habit Erect and Spreading Above. Light green elongate shape fruit length 18-20 Cm and diameter 1.5-2.5 Cm. Medium pungency with smooth fruit surface turning to red on maturity. High yielding Suitable for fresh and dry market Tolerance to powdery Mildew and Virus

## TORAL F1

Large plants with erect growing habit. Shiny yellowish green fruit turning red on maturity. Semi wrinkle fruit length 14-16 cm with diameter 1.5- 1.7 cm Intermediate resistance for Bacterial wilt and CMV, HR to viral complex. High yielding Medium Pungent Dual-purpose hybrid

## FB-SHIKHAR F1

Erect and bushy type plant habit with upright bearing. Highly pungent fruit length 6-8 Cm with diameter 1-1.2 Cm. Cluster bearing habit with smooth 6-8 fruit per cluster Dual purpose variety (Green and Dry) Virus Tolerant and heat tolerance hybrid

# F1 HY. CHILI / PEPPER

## FB-JWALA F1

Semi erect good plant stands type hybrid Medium green to turn deep bright red dry with med wrinkle segment. Medium pungent fruit length 14-15 cm with diameter 1-1.2 Cm Tolerance to Powdery mildew and virus. High yielding hybrid suitable for dry chili.

## FB-KAVYA F1

Very Early Semi spreading plant habit hybrid Good quality fruit length 10-12 Cm with diameter 2-2.5 Cm. Attractive green color cylindrical shape Low pungency of fruit use in pickles. High yield hybrid tolerance TLCV and BW

## FB-JALAPENO F1

Spreading and Tall vigorous plants habit with broad leaves. Medium Pungent dark green thick skin and firm fruit Cylindrical shape Fruit length 5-7 cm with diameter 1.5-2 cm and 5000-15000 SHU. Good for fresh markets and processing

## F1 HY. CHILI / PEPPER

### FB-BULLET (2001) F1

Busy with high vigorous plant habit Fruit length 5-6 cm and diameter 1.5-2 cm Bullet type cylindrical with blocky end shape Highly pungent (75000-100000 SHU) green and shiny fruit turn to red on ripe

### FB-MYRA (KASHMIRI CHILI) F1

Robust and erect plant habit byadgi type hybrid Long and thick fruits length 12 to 15 cm with diameter 1.5 to 1.7 cm Uniform drying, high circular wrinkle with mild Pungency fruit (15000 SHU) High yielder and excellent weight Dry fruit are carpet red in color

### FB-CHITRA F1

Big plant size with compact growing habit hybrid High Pungent Dark green fruit turn to deep red color with semi wrinkled surface Dual purpose hybrid Fruit length 9-11 Cm with thickness of 1.1 to 1.3 cm High bearing hybrid and good keeping quality Intermediate Resistance to LCV And CVMV

# HABANERO CHILI / PEPPER

## FB-2121 RED

Tall erect plant height with spreading big foliage  
18-25 gm Fruit length 4-5 cm with diameter  
2-3 cm High pungent (200000-425000 SHU) Fruit  
colour green to turn red Rippled Lantern fruit shape  
bearing in 3-4 branches Resistance to leaf curl virus  
and YVMV

## FB-2120 YELLOW

Tall Erect plant height with Spreading big foliage  
Rippled lantern in shape fruit green to turn  
yellow 20-22 gm Fruit length 5 to 6 cm with  
diameter 2-3.5 cm Disease resistance with Leaf  
Curl Virus and Yellow vein mosaic virus High  
pungent fruit (200000-425000 SHU)

## FB-2122 ORANGE

Tall Erect plant height with spreading big foliage  
Rippled lantern shape fruit colour Green to turn  
Orange Fruit length 5 to 6 cm and 2-3.5 cm  
diameter with 18-20 Gm weight Disease  
resistance with Leaf Curl Virus and Yellow vein  
mosaic virus High pungent fruit (200000-425000  
SHU)

# F1 HY. CAPSICUM /SWEET PEPPER

## FB-GREEN BELL (2011) F1

Medium Tall with Semi Spreading plant habit Glossy dark green fruit average weight 200-220 gm Fruit length 9-10 cm, girth 6-7 cm with 3 - 4 lobes. Firmness is sweet, very high yielding hybrid suitable for open field, net house protection. Longer shelf life and Ideal for long distance transportation. Highly Tolerant to Pests and Disease

## FB-RED BELL (2022) F1

F1 Medium Tall with Semi Spreading plant type Attractive fruit size & uniform light green color turn to red. Square big blocky fruit length 6-8 cm fruit length with diameter 5-6 Cm. Fruit weight 200-220 gm with thick rind Highly tolerant to major pests and disease Very high yielding hybrid suitable for open field, net house Protection

## FB-YELLOW BELL (2033) F1

Medium Tall with Semi Spreading hybrid Blocky shape fruit length 6-8 cm with 3-4 lobes Light Green fruit colour turn to yellow average weight 200-250Gm. Smooth in surface and highly tolerant to TSWV disease Very high yielding hybrid for green house.

## F1 HY. CAPSICUM /SWEET PEPPER

### FB-MONALISA (2222) F1

Tall type plant habit Blocky shape Dark green to red colour on maturity. Fruit weight 220-250 Gm Suitable for Open filed and protective cultivation.

### FB-ORANGE BELL (2044) F1

Medium Tall nicely balanced plant hybrid Blocky shape fruit weight around 200-220 Gm. Sweet Orange color variety suitable for Indore cultivation Excellent quality fruit ripens from green to a beautiful deep orange Plants are resistant to TMV.

### FB-MOHINI F1

Spreading plant habit type hybrid Green Color Fruit Length 10-12 Cm with diameter 2.5-3.5Cm Gondal wonder type Medium Pungent fruit color turn dark red on ripen It has thin skin so good for drying Resistance CMV

## F1 HY. BRINJAL

### FB-YAMINI (4070) F1

Semi Erect plant habit hybrid. Medium long ellipsoidal shape fruit weight 100-125 Gm. Pink color fruit with non-spiny green calyx and solitary bearing habit. High Disease Resistance with Colour Retention Capacity Even at High Temperatures.

### FB-RAGINI F1

Early hybrid bushy plant habit Oval shape fruit weight 80-90 Gm. Purple with white streaks and shiny color fruit length 7-8 cm and width 6-7 cm High yielding non spines cluster fruit bearing Variety

### FB-KALINDI (4093) F1

Erect plant type hybrid Shiny Black color medium long cylinder shape fruit Cluster and solitaire bearing pattern fruit weight 90-120 Gm. Green and non-spiny calyx fruit length 14-15 cm. with width 3-4 Cm.

# F1 HY. BRINJAL

## FB-RONAK F1

Open Plant habit variety Half long Teardrop shape Dark Violet shiny color fruit Fruit Length 10-14 Cm. and Fruit width 5.5-7 Cm. Green compact spineless calyx and average fruit weight 300-400Gm. Very firm fruit with long self-life

## FB- Black Dimond F1

Non-Spiny Vigorous plant habit Fruit weight 60-70 gm with length 6-7 Cm and width 5-6 Cm Shiny purple small size oval shape Fruit bearing in cluster High yield variety and good for stuffing and long-distance transportation.

# ONION

## FB-RED 11

Strong and Excellent plant development in rainy season sowing variety Bright red globe and uniform shape and size with average weight 100-150 GM. 100-110 maturity days after transplanting Tolerance to bolting good storability

## FB-1153

Kharif to late kharif variety Oval to round shape dark red color bulb High yielding variety and bulb weight 80-100 Gm with diameter 5.5 to 6.5 Cm. Maturity 80-90 days after transplanting Tolerant To Pest & Disease and good storage capacity

## FB-SWET

Round in shape Bulbs is attractive white in colour Fruit weight 150-200 Gm with diameter 8-10 cm Maturity 110-120 days after Transplant Suitable for long storage and disease resistance

## F1 HY. BITTER GOURD

### FB-VAMAN (6365) F1

Early mature Strong plant vigor Gynoecious type hybrid Fruit length 6-8 cm and girth 10-12 cm with weight 35-55 Gm Dark green color fruit first picking start after 50-55 days High yield Prolific bearing with excellent fruit quality

### FB-RASHMI F1

Medium early maturity hybrid Thick and strong spines medium green fruit segment Fruit length 12-15 cm with girth 15-16 Cm High yielding variety fruit weight 110-120 Gm

# F1 HY. BITTER GOURD

## FB-YAMUNA (6550) F1

Strong sturdy vigorous vines with dense plant habit hybrid White color Spindle shaped fruit have moderately thick spines Fruit length 20-22 cm and girth 8-10 cm with weight 160-180 Gm Prolific bearing with high yield. High tolerance to disease

## FB-JAMUNA (6525) F1

Vigorous vines growth hybrid Short white color High bearing habit and uniform fruit size Cylindrical shape 8-11 cm length fruit weight 90-100 gm Good shipping and keeping quality and High tolerance to disease

# F1 HY. PUMPKIN AND SQUASH

## FB-GANGA F1

Flattish round Shape Mottled Green with white dots fruit skin colour Fruit Weight 5 to 7 Kg with Deep Orange fruit flesh Colour Days to maturity is 80-85 Days Wide adaptability, Suitable for long distance transportation

## FB-CALIFORNIAN BUTTERNUT F1

Moderately Vigorous vine type butternut pumpkin hybrid Slim Pyriform shape Tan-yellow skin colour, Smooth skin fruits Orange fleshy pulp with a compartment of seeds in the blossom end. Fruit weight around 500-800 gm & Days to Maturity is 65-70 days Whole fruits could be stored for 6-9 months in ambient temperature

# F1 HY. BOTTLE GOURD

## FB-VAMGOLD F1

Vigorous strong creeper with dark green leaves and prolific bearer Fruit length 35-40cm with weight 600-700Gm Elongated Cylindrical in shape light green fruit color High yielding and good for long distance transportation

## FB-VAMGOLD PLUS F1

Vigorous and prolific bearer Fruit is cylindrical shape with round edge up and down side light green in color. Fruit length 55-60 cm and weight 700-800 Gm Rind is smooth with white flesh Very good yielder with good keeping quality

## FB- Bhim F1

Strong vigorous plant habit Dark Green with white spotted on fruit surface Long and cylindrical fruit length 40-50 cm with weight 1-2Kg Attractive dark green color with blotched rind pattern on fruit surface Disease tolerances is very good and uniform fruit size

# F1 HY. RIDGE GOURD AND SPONGE GOURD

## FB-VINDHYA F1

Mid early Plant habit is moderate vigorous vine growth Fruit is shiny green in color with prominent ridges and excellent setting Fruit length 25-30 cm and Width 4-4.5cm with weight around 150-180 Gm Very high yielding hybrid tolerant to DM and PM disease Fruit matures around 45 days after planting with tender white flesh

## FB-REVA F1

Mid early Strong and vigorous plant habit Attractive dark green fruit color cylindrical & uniform shape and size Fruit length 40-45 Cm with weight around 200-250 Gm Good keeping quality and thrives very well in warm and hot climate

## FB-PRABHAS f1

Early hybrid and high vigorous plant habit with profuse fruit set Fruit is long cylindrical straight attractive dark green Fruit length 25-30 Cm and width 3-4 Cm with weight about 150-200 Gm. Flesh is white tender with good cooking quality

# F1 HY. SNACK GOURD

## FB-NARMADA F1

Vines are tall growing and need a support  
Straight and tender Silver green fruit length  
5-6 feet long Prolific behaviour with high  
yielding variety

## FB-TAPI F1

Vigorous well branched plants with predominantly  
female flowers. Fruits are thick short spindle in  
shape with white shoulder and base Whitish  
colour Fruit length 28-30 cm long with 5-6 cm  
diameter first harvest 60-65 days after sowing

## F1 HY. OKRA

### FB-SAMRUDDH F1

Medium tall branching cut leaves plant habit  
Straight fruit texture and Dark green fruit  
color The first harvesting of fruits is done  
within 45-50 days Length of fruit is 12- 14 cm  
long and tender Attractive fruit Tolerance to  
YVMV And ELCV

### FB-SAKET F1

Short intermodal plant habit hybrid with  
4-6 Branches Dark Green in color Fruit  
with length 8-10 cm The first harvesting  
of fruits is done within 45-50 days  
Resistance for YVMV & ELCV

# OKRA

## FB-REVATI F1 Hy.

Dwarf to medium tall, bushy plant with 2-3 lateral branches Shiny, slender, easy for picking pod maturity in 41-45 days after sowing. Pods are dark green lustrous with length is 12 -15 cm and width is 1.5 - 1.7 cm Resistance to YMV & OLCV

## FB-VEDA OPV

Research Medium tall with good vigour Dark green color having 5-6 ridges with attractive smooth surface YMV disease resistant, uniform tender pods high yielding variety.

# F1 HY. WATERMELON

## FB-RASH11 F1

Strong and vigorous plant habit with Icebox type hybrid Small seeded oval shape fruit rind color Blackish Green Deep Red and crispy fruit flesh with 11-13 % Brix High yield and uniform fruit weight 3-4 Kg Suitable for long distance transportation

## FB-MADHU F1

Jubilee type rind pattern hybrid Oblong shape fruit are in Light green with light green strip ring color High yield variety and Average fruit weight 8 to 10 kg with Uniform fruit size with Crimson red flesh with 12-13% brix Maturity 68-75 days after showing strong resistance to wilt and anthracnose, high yield variety and good for long transportation, tolerant to repeated planting, Uniform ripening and hard skin, good for growing in open field

## FB-SHYAMAL F1

Sugar baby type rind pattern and vigorous plant habit Rind color in dark greenish black with deep red crispy flesh Round shape uniform fruit size with sweetness brix 11 to 12 % Fruit weight around 7-10 Kg and excellent for long transportation.

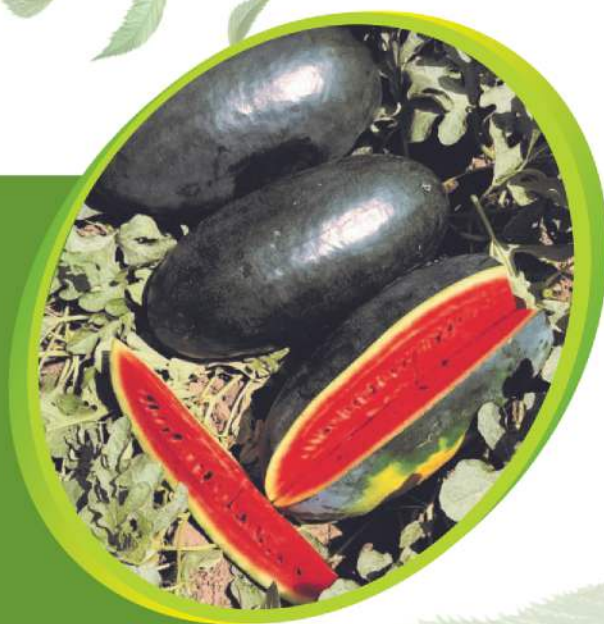

# F1 HY. WATERMELON

## FB-ROYAL RED F1

Icebox Oblong type rind pattern hybrid Dark Greenish Black Skin in colour oval shape fruit weight 4-6 Kg Deep red flesh is tender and succulent Sugar content is around 12-14% It requires 70-75 days for harvesting from sowing time.

## FB-ROYAL BABY F1

Crimson type Small sized Hybrid Round shape green fruit with dark green stripes Deep crimson red flesh with small seeds Fruit weight 3-5 Kg with brix 12-13%

## FB-MADHURAK F1

Vigorous growth with medium early and productive hybrid Oblong shape fruit weight around 10-14 Kg Crimson type Fruit Rind is light green with dark green strips Flesh is red, tender and juicy with sugar content more than 12% Strong resistance to wilt and anthracnose, high yield variety and good for long transportation

# F1 HY. WATERMELON

## FB-MAXON F1

Vigorous growth plant with Charleston grey type rind pattern type hybrid Fruit rind color is beautiful light green stripes on the light green skin Oblong shape big size fruit weight about 10-12 Kg Very sweet, juicy, and crispy bright red flesh with brix is about 13% Long self-life and very good heat resistant variety also suitable for long transportation

## FB-AKKAY F1

Early maturity Charleston type hybrid watermelon variety Fruit rind color is light green net on a light green background round to oval shape fruit weight around 8-12kg Bright and crispy red flesh Sugar content is around 12-13% Fruit sets well & firm also tolerant to hollow heart

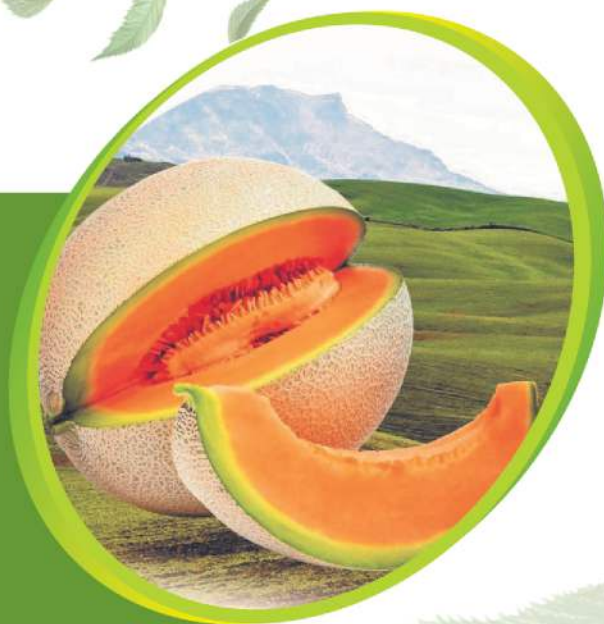

# F1 HY. MUSKMELON

## FB-MISTHAN F1

Cantaloupe type rind pattern with vigorous plant habit Round shape fruit with very dense netting orange flesh Fruit Weight 1-2 kg with with crispy and Sweet in Taste (TSS 14-15%) Good Tolerance against Fusarium, Disease & Virus, Good for Long Transport

## FB- LANA F1

Early maturity in open filed ananas type melon Netted skin oval shape fruit skin is Yellow and mesh with Green smooth lines High brix value and crispy, solid orange flesh colour. Impressive size of fruit around 2.5-3 Kg with TSS 14% Good diseases Resistance toward, powdery mildew

## FB- ANANAS F1

Early to mid-maturity Excellent ananas type melon variety. Round oval shaped fruits with a small cavity and big sized 2.5 to 3.5 kg Fruits. creamish to turn golden colour on mature with good netting. Orange soft, crispy and crumbly flesh TSS 14-16. Resistance to fusarium wilt, powdery mildew and fruit cracking.

# F1 HY. MUSKMELON

## FB- LILY F1

Early maturity galiya type melon variety Good dense net with round shape yellow skin with fruit weight 2.5-3 kg Green soft, crispy flesh with central brix 12-14 Variety good for greenhouse, tunnel or open field Good tolerances against diseases and Fusarium wilt race 0-2; Powdery mildew races 1

## FB-ELLA F1

Good coverage strong plant vigour hybrid Exterior coloring is a brilliant canary yellow with ribbed Fruit rind Oblong shape fruit weight about 2-4kg Creamy white flesh with crispy taste and high sugar content 14-17% High quality, long shelf life and firm fruit with small cavity It has a vigorous vine and it is excellent shipping

## FB-GOLDCREST F1

Canary type strong plant vigour hybrid Fruit rind color yellow with smooth Fruit rind Oval shape fruit weight about 3-4 kg Slightly greenish flesh with crispy taste and high sugar content 14-17% High quality firmness of fruit with small cavity It has a vigorous vine and Tolerant to Downey Mildew disease

# F1 HY. CUCUMBER

## FB-LALITAG F1

The Parthenocarpic Indeterminate plants are vigorous. Dark green fruit colour, The top fruit length 18-22 cm with 6-7 cm diameter. 40 - 45 days for First Harvest, 2 or more fruit per node, Resistant to Downy Mildew, Powdery Mildew and Blight, Suit for green house and Open fields planting.

## FB-ZANKI F1

Strong and fast-growing vine of parthenocarpic Beit alpha hybrid Cylindrical shape Fruits are medium thin and attractive green in color Fruit length 17 to 19 Cm with diameter 3.5 to 4.5 cm Long lasting fruit as well as good for long distance transportation Resistance to Powdery and Downy Mildew

# CUCUMBER

## FB-MADHUR F1 HY.

Strong Vigorous with branches development plant hybrid. Cylindrical shape medium to dark green colour fruit High uniformity in size with Fruit length 17-19 with diameter 5-6 Early maturity fruit picking starts 40-45 DAS with weight 110-130 gm. High yield Medium early maturity Resistance to TLCV

## FB-KESHARI

High yielding, Vigorous plant growth. Green fruit colour with long shape Fruit length 20-25 cm with weight is 100-150 gm maturity/picking is after 40-50 days Bitter free, good for long distance transportation

# RADISH AND CARROT

## FB-RED RUBBY

Attractive red color root with white flesh  
Round in shape quick growing scarlet red roots  
Root flesh and pungency is crispy & mild pungent, excellent heat tolerant

## FB-SWETA

Cylindrical with Tapering end long white root (Fruit) with broad leaf Mild Pungent Root length 15-18 cm with weight Days to maturity 40-50 Root Flesh And Pungency Is Crispy & Mild Pungent, Excellent Heat Tolerant, Suitable as An Intercrop

## FB-NANTES

Deep orange color cylindrical shape with blunt end roots Non hairy uniform in shape with Average length 7 to 8 Inch Thought out the year as per climatic conditions. Sweet, Suitable for distant transportation. less core and Crispy, Sweet

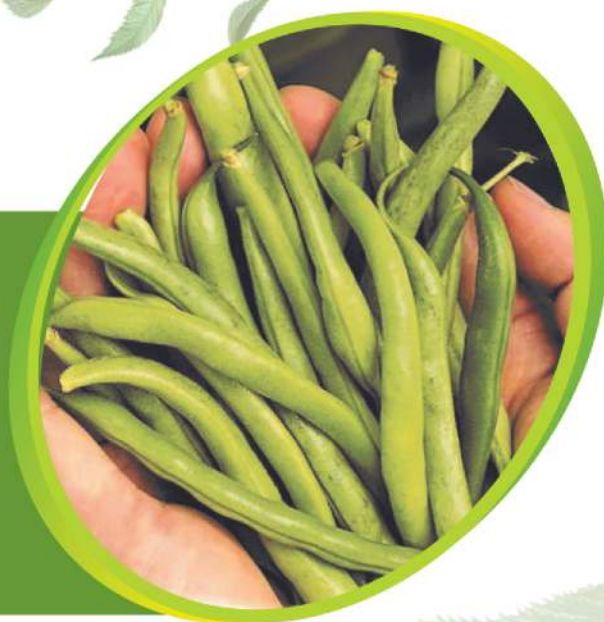

## OPV SEEDS

### FB-WHITE PEARL FRENCH BEAN

Bunching type bearing pod plant habit flat shaped long Pod length 14-16 Cm Days to maturity 55-60 days

### FB-SUVARN CLUSTERBEAN

Erect and single stem plant Vigorous fruiting in cluster from the bottom Growth Habit Attractive Lustrous green pod colour with length 10 - 12 cm Slim, long, shiny fruits with excellent keeping quality

### FB-GRIVA PEAS

Medium tall with well spread lateral branches The pods are straight and medium green with Dark green seeds Maturity 70 to 75 days Average yield 4-6 tons/acre Special feature tolerant to powdery mildew Pod length 11 to 12cm. with 8 to 10 grains per pod.

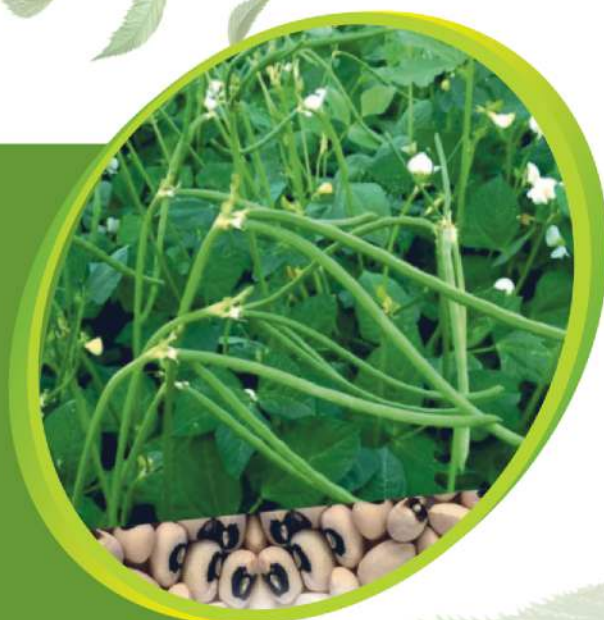

## OPV SEEDS

### FB-KIRTI Cowpea

Legume length is 12-15cm, No of branches/plan is 15-20 with 90-94 Cm plant height, Legume diameter is 5 mm, 1st picking after 45-48 days, Milky white seeds color and green fruit color, Yield/acre of 1000 to 1200 kg/acre(average). This variety is resistance to YMV, leaf spot and powdery mildew

### FB-AVANTIKA

Plants are vigorous quick growing Uniform green tender broad leaves, profuse foliage. Upright growth and early maturing give 4-6 cutting Moderate tolerant to disease Maturity in 90 - 110 Days

### FB-RED BALL Beetroot

Round root shape with deep red color 110 - 150 Gm Root weight 61 - 65 Days of maturity, Uniform flesh without white rings Very juicy and good for salads.

# HY. MORINGA

## FB-PKM 2 f1

superior variety from pure line breeding program ensure high productivity plants. The pods are fleshy with good cooking quality the flesh turns soft and delicious with less fibre The pods are less seeded and delicious. The pods are 126 cm long, with a girth of 8.3 cm and individual fruit weight of 280 g with 70% flesh. It is adapted to most soil types varying from sandy loam to clay loam with good drainage. It yields 98 tonnes/ha. Ratoon crop can also be taken up for three years.

## FB-ODC 3

The plants grow to a height of 8 10 feet in a year and produce 6-10 primary branches. Drumstick pods look evenly fleshy with more girth taste, flavour and aroma Pods have more self-life and keeping quality without losing its freshness and taste. The pods are 2 to 2.5 feet long with a girth of 2 to 2.5 inch and weigh 70 to 90 grams with 80 % flesh. Average number of fruits reaching over 500-800 per tree The estimated yield is around 25 -30 tons per acre per year.

## FLOWER

### FB-BHASKAR F1 HYBRID SUNFLOWER

Plants are medium tall, Robust growth Head Medium, Convex, semi erect, uniform, and completely filled up to the centre seed setting very attractive & good eye appeal. Widely adopted, medium duration 95-105 days. 25-30 Cm Diameter with 700 to 800 Gram Mature flower weight 42-43 % oil content

### FB-SUN777 F1 HYBRID SUNFLOWER

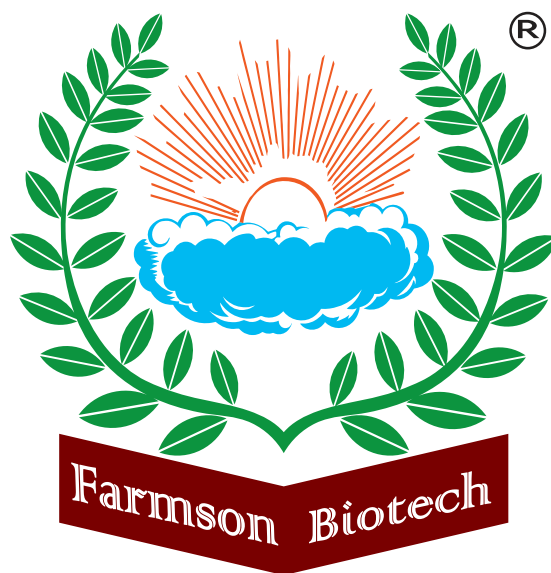

Versatile hybrid (Suitable for all type of soils & Agro climatic conditions) Seed setting very attractive & good eye appeal. Widely adopted, medium duration 100- 110 days Highest volume of Single hybrid being sold in the market 25-30 Cm Diameter 600 to 700 gram Mature flower weight

### FB-COSMOS FLOWER

The strong stems and long-lasting flowers of this easy to grow annual type plant Cosmos plant can grow to a height of 100-110 cm. Cosmos produces masses of daisy-like flowers above delicate ferny foliage throughout summer and autumn Cosmos produces beautiful varying contains a superb range of colors including white, pink and carmine. The flowers can be used in vases as a cut flower. Cosmos will bloom continually when the flowers are cut regularly.

**FARMSON BIOTECH PVT LTD** is committed to providing quality hybrid vegetable seeds to its customers. We strive to develop high-yielding and disease-resistant varieties of vegetable seeds and make them available at a very competitive price. Our team of experts is dedicated to providing the best quality vegetable seeds to meet the needs of our customers. We use advanced technologies and cutting-edge research to develop our products.

We are also committed to providing excellent customer service and timely delivery of our products. We are also a leading supplier of FAO Food and Agricultural Organization, United Nations. We successfully completed of FAO tender with timely manners and as per FAO stander.
