

Airless Shot Blasting Machine

The Airless Shot Blasting Machine is a high-performance surface preparation system designed for cleaning, descaling, rust removal, and shot peening operations. It uses centrifugal blast wheels to propel abrasive media at high velocity for efficient and uniform surface treatment.

Key Features

- High cleaning efficiency
- Continuous operation
- Heavy-duty construction
- Automatic abrasive recycling
- Integrated dust collection system
- Low maintenance and energy efficient

Technical Specifications

Specification	Details
Machine Type	Airless Shot Blasting Machine
Blast Wheel Type	Centrifugal Turbine
Blast Wheel Power	7.5-30 HP
Number of Wheels	1-8
Shot Velocity	70-80 m/s
Abrasive Media	Steel Shot, Steel Grit
Dust Collector	Bag Filter Type
Power Supply	415V, 3 Phase, 50 Hz
Operation	Automatic/Semi-Automatic
Construction	Heavy Duty Fabricated Steel
Applications	Surface Cleaning, Rust Removal, Shot Peening
