

# P-501R Portable Sand Blasting Machine

The P-501R Portable Sand Blasting Machine is a heavy-duty pressure type abrasive blasting machine designed for surface preparation, rust removal, paint stripping, cleaning and industrial maintenance applications.

## Key Features

- Heavy-duty construction
- Portable wheel-mounted design
- High blasting efficiency
- Easy operation and maintenance
- Compatible with various abrasives
- Industrial safety features

## Technical Specifications

| Specification     | Details                                            |
|-------------------|----------------------------------------------------|
| Model             | P-501R                                             |
| Type              | Portable Sand Blasting Machine                     |
| Vessel Capacity   | 142 Liters                                         |
| Abrasive Capacity | 230 kg Sand / 500 kg Metallic                      |
| Working Pressure  | 5-8 Bar                                            |
| Max Pressure      | 10 Bar                                             |
| Air Consumption   | 110-135 CFM                                        |
| Blast Hose        | 25 mm x 10 m                                       |
| Nozzle Size       | 6, 8, 10 mm                                        |
| Machine Weight    | Approx. 180 kg                                     |
| Construction      | Heavy Duty Mild Steel                              |
| Application       | Rust Removal, Paint Stripping, Surface Preparation |
