AGRI EQUIPMENTS

L Type Rotavator Blades:

L-type rotavator blades are specialized, high-performance agricultural tools designed for efficient soil cutting, mixing, and seedbed preparation, particularly in soft to medium-hard soils.

Cultivator Shovel:

A cultivator shovel is a durable, typically boron or high-carbon steel, ground-engaging tool attached to cultivators to break, aerate and turn soil for seedbed preparation.

Cultivator Pin & U

"Cultivator pin" and "U" refer to specific spare parts used to assemble and secure agricultural cultivators, which are farm implements used to prepare soil.

Cultivator Spring

Cultivator springs are essential components for spring-loaded tillers, designed to protect tynes from breaking by absorbing shocks when hitting hidden obstacles, allowing uninterrupted, consistent-depth soil tillage.

THAT ASSISTS
FARMERS IN
IMPROVING THEIR
EFFICIENCY AND
PRODUCTIVITY.
