About Us

We have a comprehensive yet wide assortment of GI Earthing Electrode. This electrode is developed especially for its application in safe earthing of areas and buildings. Manufactured in Mild steel pipe and it is hot dip galvanized, this is broadly demanded by our clients. Our customer can avail this GI Earthing Electrode as per their requirements at most competent prices.

Benefits of Earthing Electrodes:

Earthing electrodes have multiple benefits especially when it comes to the protection of man and material from electrical shocks or faulty equipment and appliances. Here are some notable benefits of earthing electrodes :

- Protection of human or animal lives from electrical shocks;
- Protection of homes, machinery, appliances, and equipment under faulty electrical conditions;
- Guard against power surges due to lightning nearby;
- Eliminates or reduces voltage fluctuations in buildings;
- Ensures steady voltage supply;
- Reduces electrical noise; and
- Provides safe passage to dispel short circuit currents and lightning.

We manufacture outstanding quality GI Earthing Electrodes. GI or galvanized iron is achieved through galvanization of iron which is a process of coating the iron with zinc. Thus, galvanization of iron increases its corrosion resistance. There are other materials, such as stainless, which are more resistant than galvanized iron but they are not cheap and therefore, not the preferred choice for earthing electrodes.

Key Facts

No of Staff	20
Year of Establishment	2016
No of Production Lines	1
OEM Service Provided	Yes
Monthly Production Capacity	10000

Our Products

GI Earthing Electrode

Solid Copper Earthing Rod

High Performance Earthing Electrode

Copper Bonded Earthing Rod

Copper Grounding Rod
