

Single Phase DC Drive Rectifier

Product Description

Single Phase DC Drive Rectifier is engineered for reliable conversion of AC power into stable DC output for industrial drive applications. Manufactured with high quality electrical components and a robust metal enclosure, it delivers efficient performance, operational safety, and long service life. The panel is suitable for industrial machinery, automation systems, and motor control applications.

Features

- Reliable DC output
- Heavy duty metal enclosure
- Easy installation and maintenance
- Integrated meters and control switch
- Long service life
