Activated Calcium Carbonate (ACC)

Mainchin Chemicals, Trusted Global Partner & One Stop Solution for
Activated Calcium Carbonate ACC

Top Global Activated Calcium Carbonate ACC Supplier

Mainchin Chemicals is offering a wide array of premium quality Activated Calcium Carbonate (ACC) to our customers. The quality of the Activated Calcium Carbonate (ACC) that we offer is very well known for the purity as well as the ease with which it can be used in multiple applications.

Activated Calcium Carbonate is produced by surface coating the Precipitated Calcium Carbonate slurry with Fatty Acids (Stearic Acid) and Titanate Coupling Agent then filtering and drying of the coated PCC slurry to produce ACC powder. The particle size, as well as the crystal form is precisely controlled by temperature, concentration of reactants and other process parameters.

Specification

Properties	Unit	Specified Limit
Whiteness	10%	95-96
Average Particle Size	D50	2-3.5 microns
PH (1% aqueous solution)	-	9-10.2
Bulk Density	gm/cc	0.8-1.0
Silica (SiO ₂)	%	Max 0.5
Water Proofing	%	95
Coating (Stearic Acid)	%	1- 1.75
CaCO ₃	%	96-98
Insoluble matters in HCl	%	< 0.5

Activate Calcium Carbonate (ACC) Features

- ✚ Best Quality and Highly effective
- ✚ Precisely formulated and Accurate composition

Activated Calcium Carbonate (ACC) Applications & Uses

- ✚ Plastics & PVC Industry
