BATCH TYPE OF ROLLER PEELER

The Batch type roller Peeler is suitable for peeling potatoes, carrots, Ginger, Potatoes, and other root vegetables. Keeping the water usage to a minimum and ensuring the lowest possible material losses during peeling is a very important factors when choosing a peeling system for your process, since the result of peeling for each individual potato will affect the quality of your finished product.

The Batch type of roller Peeler has eight high-speed rollers. Specially selected coating material and the coating process combine to make the rollers very durable and long-lasting. The Nylon rollers can be replaced by Abrasive rollers for optimum effect when preparing fresh potatoes or when the unit is used for deskinning. All eight rollers can easily be exchanged if nylon brushes or a new roller set is required. A central auger conveys the potatoes through the length of the peeler. By adjusting the auger speed and the speed of the abrasive rollers, the desired degree of peeling is achieved. Speeds are adjusted via frequency converters placed in the control panel

BATCH TYPE OF ROLLER PEELER ADVANTAGES

Easy to use

Require less space and power.

Peeler	L(mm)	W IN-FEED (mm)	H IN-FEED(mm)	INSTALLED POWER	ROLLER
AQP250	700mm	550mm	750mm	.80kw	07
AQP500	1100mm	900mm	750mm	1.60kw	07
AQP800	1800mm	1400mm	750mm	2.40kw	07
