Panel Built modular isolation rooms to meet demand in increase of coronavirus affected patient

- “Our objective is to help our nation to meet the challenges of treating corona affected patients and save their lives. Our nation's hospitals and health care sector may need many isolation chamber. The Panel Built isolation chambers can meet demand in very cost effective and in very short time span .”
-
-

-Chandrakant Patel (MD)

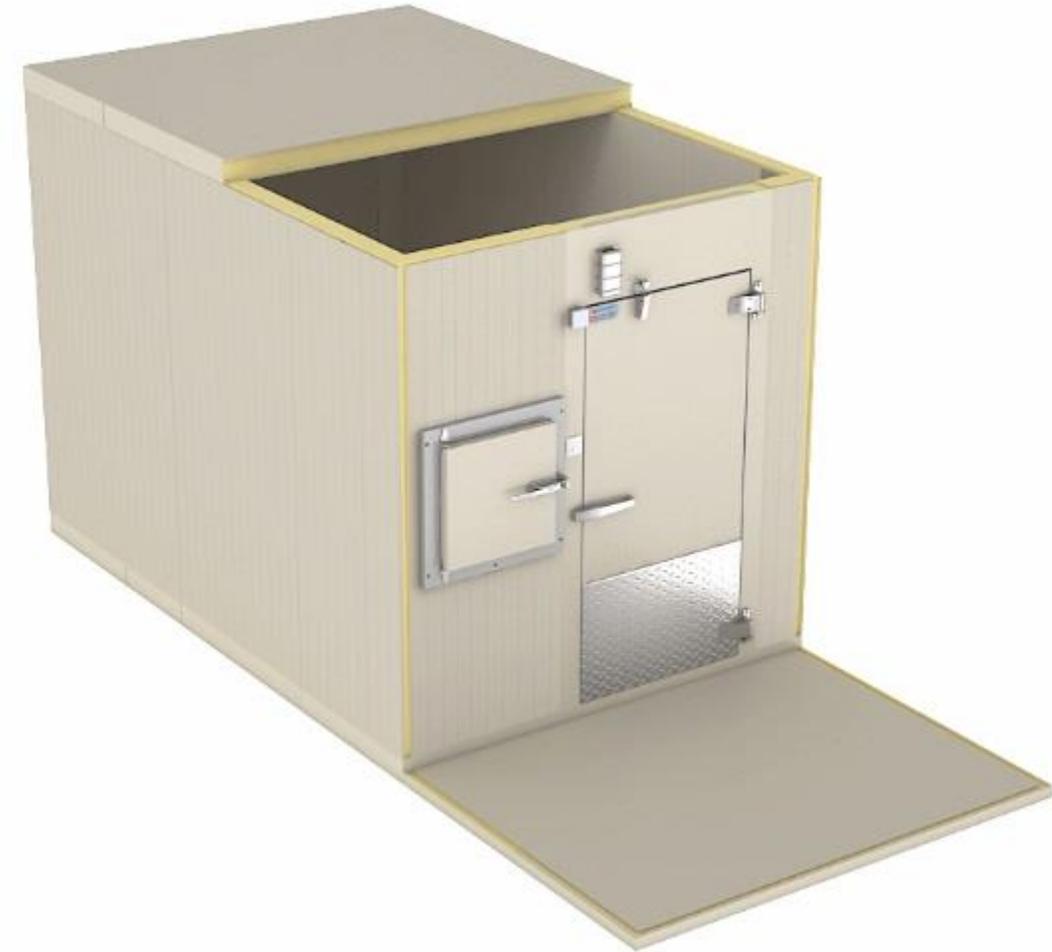

- India stands at crucial juncture of the curve where next level preparedness is essential to handle Covid-19 affected patients
- The infrastructure needs to be created at temporary locations with utmost speed to support the existing hospitals, health care centers or special Covid-19 Quarantine centers.
- Panel built modular isolation rooms can be single, multiple or series of rooms depending on the requirement
- Can be built without any civil structure
- These rooms can be dismantled and reassembled at alternate location as and when required
- Negative pressure rooms can also be created for critical patients

- The panel and components are fabricated offsite
- Post delivered it takes minimum time to assemble
- The layout can be customized as per the site
- The site surface can be smooth, Rough, un even, In door or outdoor
- These do not get affected by weather hence safe for inpatients

Essential for isolation room

How Puff panel room meets the requirement

Single occupancy customized room

- Around 10x7x8 (LxWxH) feet Isolation room with door, glass window can be built rapidly
- Basic facility like fan and toilet can be provided.
- It is easy to clean, and does not conceal or retain dirt or moisture within or around it.

It require negative pressure isolation rooms to avoid any airborne spread of virus

- Negative pressure can be created through exhaust fans
- exhaust air can be passed through UV light to avoid airborne spread of virus or any contamination

Essential for isolation room

How Pff panel built room meet the requirement

Proper ventilation

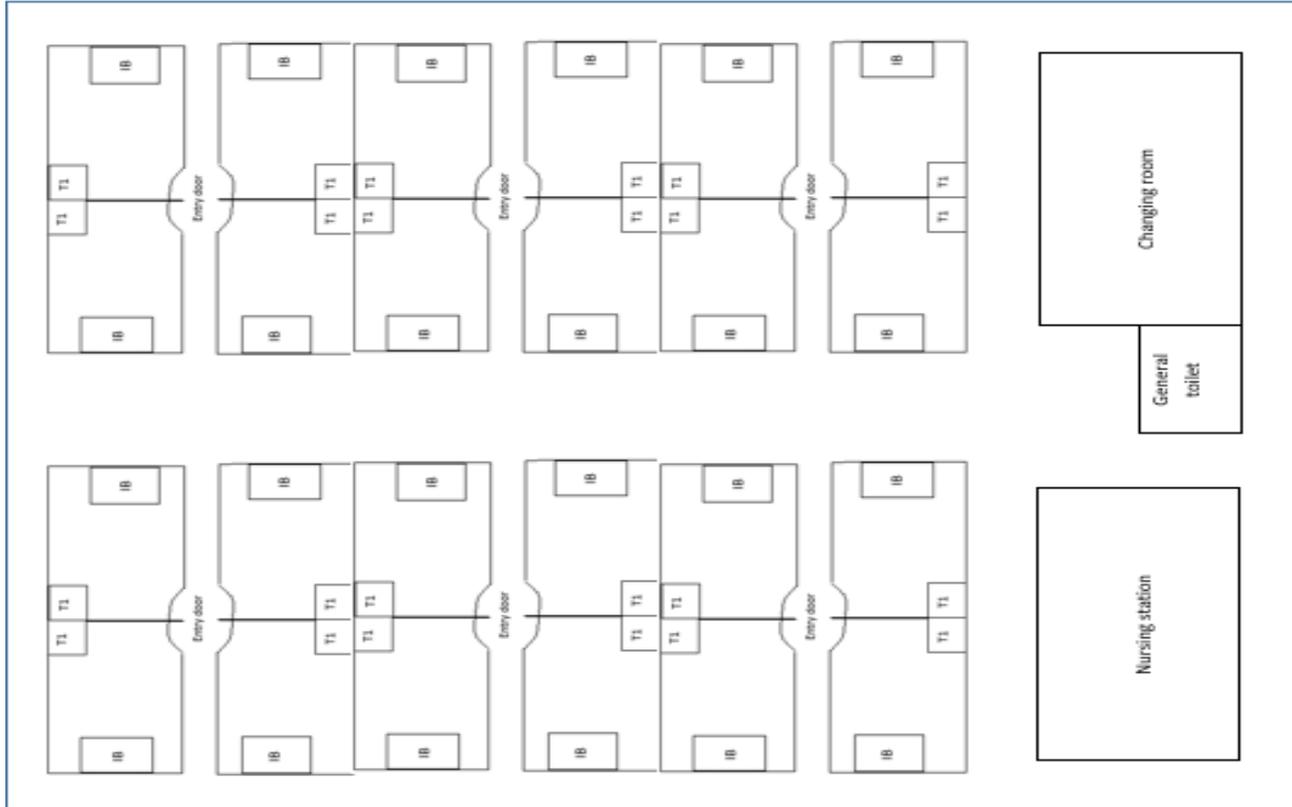

- Isolation rooms require around 10-12 air change per hour and it can be maintain by exhaust fan.
- When room installed in open ground then natural ventilation is preferred.
- AC can be installed individually if required.

Partially separated room

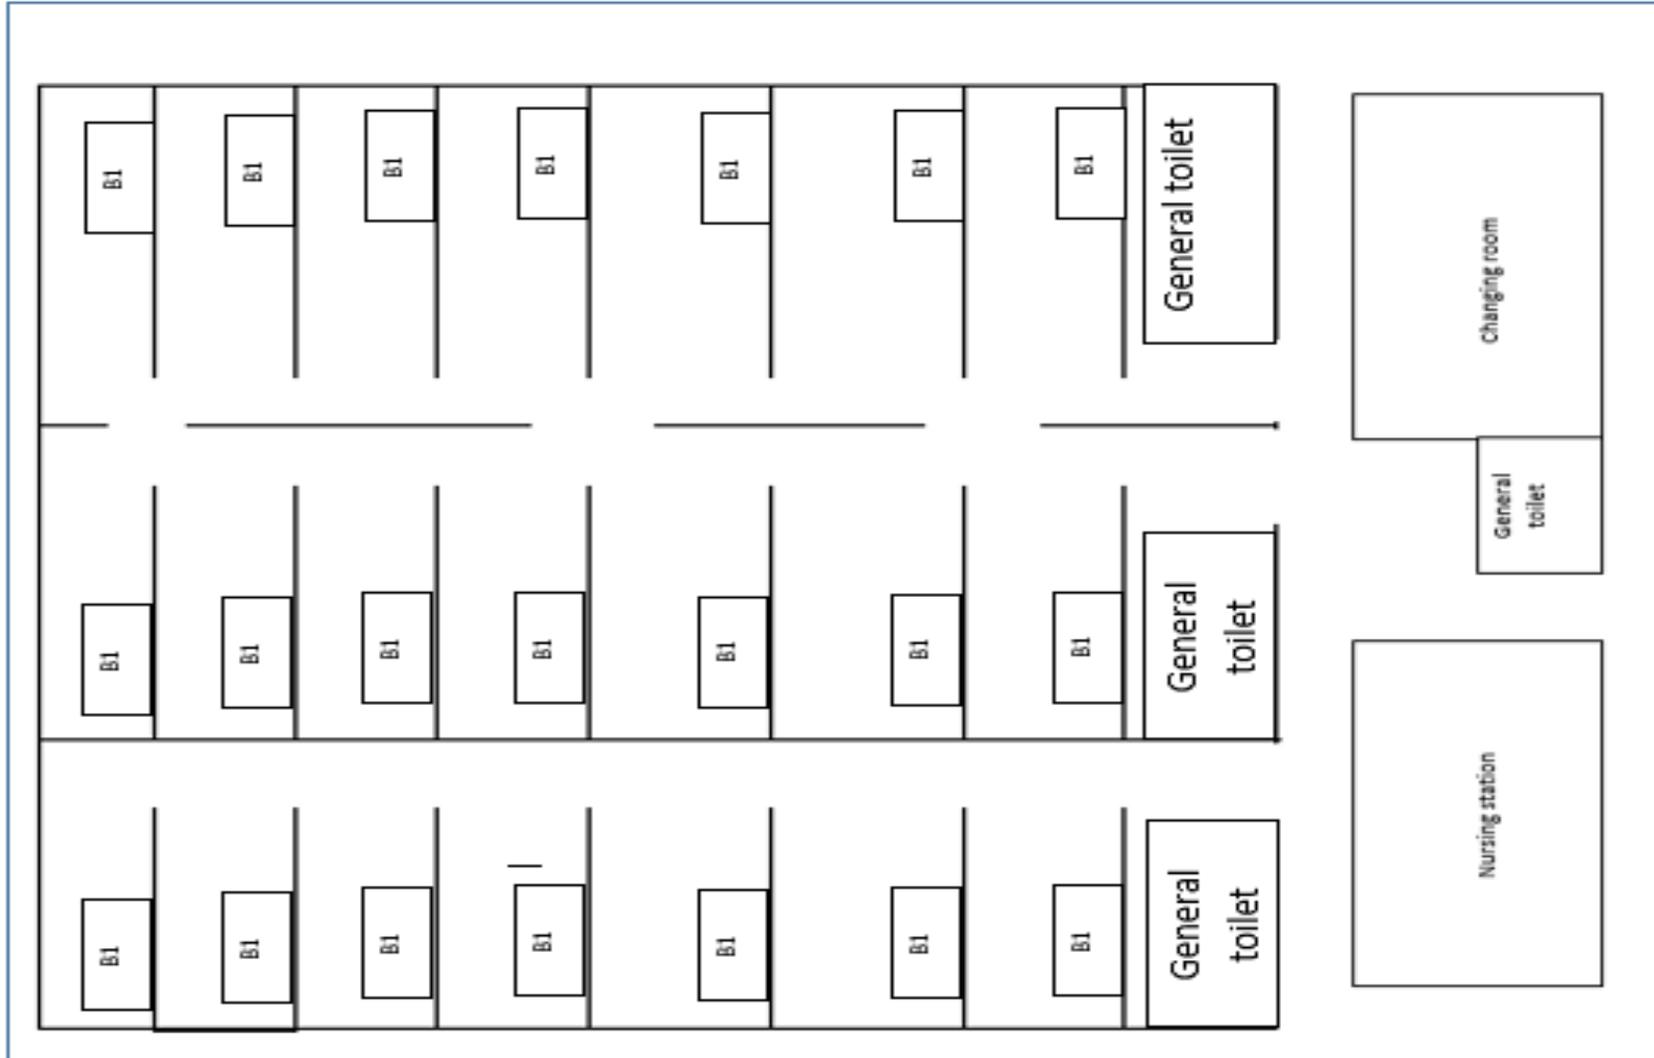

- Semi isolation room as beds could be put with a special separation by wall panel up to at least 1-3 meter from one another

Nursing station and basic facility

- It is possible to build double door entry changing room and nursing station with basic facility

IB: Isolation bed, T1: Toilet

B1 : Patient bed
