

Industrial UV Roll To Roll Printer

The Industrial UV Roll To Roll Printer is a high-performance digital printing machine designed for large-format and industrial-grade printing applications. Built with a durable metal body, this printer delivers excellent print quality with vibrant colors and sharp details using advanced UV ink technology. It supports roll-to-roll media printing, making it suitable for banners, vinyl, flex, wallpapers, films, fabrics, and advertising materials. The printer features automatic operation with a computerized control system and Human Machine Interface (HMI) for smooth and efficient workflow management. Its fast printing speed and high production capacity make it ideal for commercial printing industries. The UV curing system ensures instant drying, scratch resistance, and long-lasting print durability. This machine operates on 220-440 Volt power supply and is designed to provide stable performance under industrial working conditions. With reliable color management and flexible print direction support, the printer ensures precision and consistency for professional printing needs.

Specification	Details
Type	Roll To Roll UV Printer
Material	Metal
Capacity	100-500 Sq. Ft./Hour
Printing Speed	30-60 m ² /hr

Computerized	Yes
Automatic Grade	Automatic
Ink Type	UV Ink
Control System	Human Machine Interface
Working Temperature	20-30 °C
Power	220-440 Volt
Warranty	Yes
