

Automatic CNC Turning Lathe Machine

This PDF includes the uploaded image of an Automatic CNC Turning Lathe Machine and a short product overview.

The machine shown appears to be an industrial CNC turning/lathe system designed for automated machining and precision manufacturing applications. CNC control enables repeatable operation, dimensional accuracy, and efficient production workflows.

Typical features:

- Automatic CNC operation
- Industrial metal processing capability
- High precision machining performance
- Enclosed working area for operator safety
- Suitable for turning and production applications
