Three Phase CNC Turning Lathe Machine

This PDF contains the uploaded image and a brief overview of the Three Phase CNC Turning Lathe Machine.

The machine shown is an industrial CNC turning lathe designed for precision machining and automated production processes. It operates on a three-phase electrical system and supports consistent performance for manufacturing applications.

Typical features:

- Three-phase electrical operation
- CNC-controlled turning process
- High precision and production efficiency
- Enclosed machine structure
- Suitable for industrial metal machining
