## M/S. BIMAL PHARMA PVT. LTD. MUMBAI, INDIA

# Titanium Dioxide in Cosmetic Industries

## Introduction

- $\text{TiO}_2$  (**CI 77891 or PW6**) is one of the Cosmetic Industry's best-kept secrets, having been used by beauty brands and skincare manufacturers alike for decades.
- It is used particularly in Decorative Cosmetics and sun care products suitable for sensitive skin.
- It is used in Cosmetics to enhance on-trend Colours and Formulations in a number of ways:
  - **Colour** : Use of Pigment Form  $\text{TiO}_2$ , with other Colours gives Intensity and Brightness to decorative cosmetics, as well as allowing the manufacturers to create many different shades to suit all skin types in Foundations and Lipsticks.
  - **Light** : It helps soak up oils in the skin, while lending it an **Opacity** that reduces any unwanted shine – a key selling point for any Matte-based cosmetic.
  - **UV** : Non-Pigment Form  $\text{TiO}_2$ , is a key Ingredient in sun care products, absorbing and scattering both UVA and UVB rays, which prevents sun burn and premature ageing.
  - **Texture** : In its Non-Pigment Form, its particles become Transparent, helping to create much smoother and sheer Formulations with a better spreadability. Its opaque qualities are also crucial to formulations that conceal blemishes.
  - **Staying Power** : As an insoluble mineral, Non-Pigment Form  $\text{TiO}_2$ , is prized for its long-lasting and waterproof properties, which is important for sun care products in particular.
- It is so well tolerated by the skin, there is rarely any substitute for it.
- In Pigment Form,  $\text{TiO}_2$  is certified in the USA by FDA (21 CFR 73.2575) and in the EU as Colour Additive, E171 ; while Non-Pigment Form  $\text{TiO}_2$ , is certified for safe use in the USA by the USP and in the EU (Annex VI, Cosmetics Regulation 1223/2009).
