

New **WALK THROUGH** Metal Detector (Door Frame)

Approved by

Walk Though (Door Fame) Metal Detector

Technical Specification

Our Security Metal Detectors are quite helpful for security purposes and are widely demanded in numerous different fields that include: airports, the military in mine fields, geophysical miners, beach-combers and different other security checkpoints. Metal detectors are made up with oscillators, which bring forth an alternating current that passes through a spiral and appoints an alternate magnetic field. When an electronically conductive metal is close to these detectors, these create eddies of air, that origins an occurrence in the magnetic field, which enables the operator to perceive where the metal is. Our Metal Detectors are reliable and ask for easy usage and less maintenance.

Key Points of Metal Detectors

- Helpful for uncovering metal inclusions concealed within objects, Pulse induction property.
- Can be used for the functions of archeological discoveries due to their versatility and promptness.
- Utilized in the food, beverage, textile, pharmaceutical, lumber, mining, garment, chemicals, plastics, and packaging industries.
- In civil engineering, specific metal detectors are put-upon for finding reinforcement bars inside the walls.

Available at

- 6 Zone Metal Detector
- 8 Zone Metal Detector
