WITHOUT TOUCHING
Temperature Detector

Approved by

Walk Though (Door Frame) Metal Detector

Technical Specification

Thermal imaging systems are designed and produced for coronavirus control. We use thermal imager cameras to collect the group people body temperature, analysis and report in our software system to show all real time body temperatures, alarm for the high temperature people with light and sound. Make record of all alarmed person. All inspection process are automatically done without any touching.

The main features of the thermal imaging systems focus on the following

- ▣ No touching body temperature measuring
- ▣ Group people pass without stop
- ▣ Sound and light alarm for high temperature person
- ▣ Data management system to have records
- ▣ High accuracy measuring with real time numbers of temperatures.
- ▣ Self setting of the alarm temperature.
- ▣ Easy operation for any junior operators.
- ▣ Easy movement and installations for any public places

Market Application

- ▣ Manufacturing Companies, Hotels and Corporate Offices, Malls , Airports, Metro/Railway Stations, Defense Borders, Border Control - Sea Ports/Borders , Police and Paramilitary Hospital, School, Temple, Other Public places
