About Us

Integrity, punctuality, transparency and excellence are the core values of our 1995 established company, Sheetsol Private Limited. The company hold great experience and knowledge in manufacturing EVA Sheets which are used as padding in sports equipment, fishing items, seals & gaskets, etc. By maintaining highest standards in our products, we are able to achieve ISO 9901:2015 and CE certifications. Over the years, we have faced several market challenges and overcome them because of our sound facilities, skilled workforce and great market understanding. Our reliable market reputation is one of the biggest strengths of the company which make us a distinguished manufacturer and supplier in the domestic market.

Our EVA Sheets are thermo-efficient EVA encapsulant which cures 2-3 minutes faster per module production cycle. This is much faster than the encapsulants currently available in the market. This excellent breakthrough formulation is supported by experts and scientists who focuses on quality, durability and legacy.

The encapsulant film developed by Sheetsol has a wide processing window which eliminates all the past process-related problems. We have designed the products to suit all the standard laminating machines and rigorously test the quality of the products. This quick cure EVA increases the productivity by 10-20% within the existing capacity set-up and eliminates the requirement for new capacity addition.

Owing to the advanced production technology, the EVA are produced without induced stress which allow it to exhibit ultra-low thermal shrinkage. This provide benefits like material saving and improved PV module aesthetics.

Focus on Quality

Being an ISO 9901:2015 and CE certified firm, we lay complete stress on the quality of our offered EVA Sheets. To ensure that our customers receive high quality EVA Sheets, we make sure to use finest materials and advanced technologies in the manufacturing processes. Further, we take help from our proficient experts for manufacturing the goods in adherence to the global standards.
