Using freezing pads for the transportation of perishable products is a common practice to maintain their temperature and quality during transit. Freezing pads, also known as gel packs or ice packs, are designed to absorb heat and keep the contents cool. You can effectively use freezing pads for transporting perishable products.

CHOOSE THE RIGHT FREEZING PADS:

Select freezing pads that are appropriate for the temperature requirements of your perishable products. There are various types of freezing pads available, such as reusable gel packs, and phase-change materials. Consider the temperature sensitivity of your products and the duration of transportation when choosing the right freezing pads.

**INSULATED TUBS | ICE BOX | PALLETS | SPILL PALLETS | DOFF BASKET | MILK CAN
SAFBIN | CHILLING PAD | PALLET CONTAINER | PROCESSING TROLLEY**

PRE-CHILL THE FREEZING PADS:

Before using the freezing pads, make sure they are properly chilled. If you're using reusable gel packs, place them in a freezer until they are completely frozen.

PACKAGING AND PLACEMENT:

Place the frozen freezing pads strategically within the packaging of your perishable products. Ensure that the freezing pads are evenly distributed to maintain consistent cooling throughout the package.

Remember that different types of perishable products have varying temperature requirements, so it's important to tailor your approach to suit the specific needs of your products. Proper planning, careful execution, and adherence to safety guidelines will help ensure the successful transportation of perishable products using freezing pads. Contact us for further details.
