Tipper Trucks

General information on tipper trucks

Tipper trucks are considered to be torsionally flexible bodywork. Tipper trucks are mainly used for the transport of loose materials. The tipper body is jointed and dumping is done using tipping cylinders. PRL can prepare the vehicle for the bodywork at the factory

Design

- Rear tipper truck: Tipper truck with tipper body which can only be tipped backwards.
- 3-way tipper truck: Tipper truck with tipper body which can be tipped backwards and to both sides. The tipping cylinder is mounted centrally under the body. The sub frame contains a front and a rear tipper axle which serve as tipping joint for each tipping direction.
