## ULTRASONIC BATH (SONICATOR)

Ultrasonics (Ultrasound) is the sound which human beings cannot hear. Ultrasonic utilises frequencies from and above 18 khz (18,000 cycles per sound) High frequency electrical energy is converted into ultrasound waves by means of ultrasonic Transducers, which are bounded on the base of S.S. Cleaning Tank. These high frequency sound waves create in the liquid countless. Microscopic vacuum Bubbles which rapidly expand and collapse.

## HUMIDIFIER (S.S. BODY)

Based on the rotating disc-splash plate principal. It produces only super fine particles of micron size, which becomes part of the atmosphere, thereby reaching every corner of the room, resulting in Uniform humidity. Due to the upward thrust imparted to the micron size water droplets, by high Speed motorized unit they remain suspended in the atmosphere for longer duration of time. The Unit is capable of atomizing up to 3 liters of water in an hour at full evaporation in the driest possible ambient condition. The unit has body made up of S.S. A single unit is effective for an enclosed space Of volume up to 40 cu. mtrs. The unit is provided with high speed 2800 RPM motor to run longer Period and the blades are aerodynamically balanced to ensure droplets fumigation. To work on 220/ 230 volts A.C. Supply.
