## About Us

Intelligent innovations have shaped the world for the better. Many machine manufacturing companies have become product innovators today, thanks to the way they have integrated latest technologies into their everyday work operations. New emerging technologies now find way into their production works, helping them sustainably build machines that positively impact their business and the businesses of their customers. Taking full profit from advanced technology and keeping pace with rapid technological change is our company Guangdong Hongke Machinery Co., Ltd., based in Guangdong, China. Since we began in 2009, we have been accelerating our success by decreasing the chasm between innovative machines and high product prices by selling affordable Plastic Film Granulator Machines like Medium Plastic Film Granulator Machines, Titan Plastic Film Granulator Machines and Small Plastic Film Granulator Machines. We are considered the first company to make use of low-temperature granulating technology. No water is wasted on cooling when one adopts this new age technology of plastic granulation. The technology also eliminates the need of high temperatures to melt various materials whose original properties are retained post the granulating process.

We greatly appreciate the daily contribution of our 200+ employees who know how to reap benefits from technological learning and innovation to extend many benefits to our customers. As a major technology provider and machine manufacturer cum exporter, today, we offer different machine models for catering to plastic granulating and recycling demands of different industries. Machines we offer feature many building blocks, the most important being their components and parts. We make use of the abundant supply of high-grade raw materials available in our country so that we can engineer innovative and cost-effective machines and then supply them to clients as per our committed deadlines through a nimble supply chain network. Our business is not concentrated only on high income countries, but we also proudly export machines to many middle income and low income ones. This is how we have been stimulating the growth of both small and big businesses across various nations for many years. We wish to forge collaborative business agreements with many more international companies and give them access to leading-edge technology at great prices. We warmly welcome polyethylene (PE) plastic film products businesses from around the world that aspire to strengthen their works using our innovative, low-cost, durable, easy to use, ecofriendly and compact machines. Feel free to participate in our growth and herald yours too with our long-term association.

Companies can even send us their wasted materials, or any of their unqualified plastic products. After analyzing them using our plastic film granulating machine, we can find the most suitable equipment that would meet their plastic granulating and recycling need. We do this testing free of charge.

## Key Facts

<b>No of Staff</b>	230
<b>Year of Establishment</b>	2009
<b>OEM Service Provided</b>	No

## Our Products

**Medium Plastic Film  
Granulator Machines**

**Titan Plastic Film  
Granulator Machines**

**Small Plastic Film  
Granulator Machines**
