ORGANIC PLANT FOOD FERTILIZER

SASYA SAMRAKSHAK BIO FERTILIZER

PLANT IMMUNITY BOOSTER

About Us

To help farmers get good crop yields, our company, Microbi Organics Llp, offers a comprehensive range of bio fertilizers. Since the year 2023, we began operating as a manufacturer, supplier and exporter of the most effective agricultural solutions. We have gained a lot of popularity for offering a wide array of agricultural products such as Soil Intended Bio Fertilizer To Use For Sugarcane, Soil Phosphate Solubilizer Bio Fertilizer, Bijopachar Rhizobium Bio Fertilizer, Azospirillum Brasilensis Bio Fertilizer, Intended Bio Fertilizer To Use For Coffee, etc. For the manufacturing of the products, we use the highest quality raw materials, which are procured from reputable vendors. In addition, to promote the usage of good quality bio fertilizers among more and more farmers, we have priced all our products inexpensively.

Being a manufacturer of various agricultural products, our emphasis is always on quality. We procure raw materials of the highest quality from the vendors and use them to manufacture products like Bijopachar Rhizobium Bio Fertilizer, Intended Bio Fertilizer To Use For Coffee, Soil Intended Bio Fertilizer To Use For Sugarcane, Azospirillum Brasilensis Bio Fertilizer, Soil Phosphate Solubilizer Bio Fertilizer, etc. All manufactured batches are ensured to comply with the highest quality standards prior to being delivered to customers.

Microbi Agrotech Private Limited is our sister concern company which has been in operation for more than a decade. The company has been using ancient techniques for producing organic manure and bio-fertilizers. They have educated and mentored over a million farmers, contributing to their remarkable achievements and the abandonment of chemical agriculture techniques. The main goals of the company are to increase farming efficiency, raise the quality of harvests, and lower overall expenses while also restoring the fertility and sustainability of the soil. They are adamant that the 50 years of dependence on chemical research have been harmful to the soil, and they place revitalizing the ground before crop quantity or quality as their top priority.
