

SANDSTONE JALI

Natural Stone Screens for Decorative and Architectural Applications

Product Overview

Sandstone Jali is a decorative screen made from natural sandstone, featuring cut-out patterns that allow light and air to pass through while adding texture and visual interest to a space. It can be used in residential, commercial, and hospitality projects as a feature panel, partition, façade element, balcony screen, or garden accent. Natural sandstone offers an earthy appearance that can complement both traditional and contemporary architecture.

Key Features

- Natural stone texture
- Decorative cut-out patterns
- Allows filtered light and airflow
- Suitable for custom designs
- Warm, earthy appearance
- Can be used in indoor or outdoor projects

Common Applications

- Exterior façades and feature walls

Frequently Asked Questions

Q1. What is Sandstone Jali used for? It is used for decorative partitions, façades, privacy screens, balconies, and garden features.

Q2. Can I order a custom pattern? Custom patterns may be available depending on the supplier's design and cutting capabilities.

Q3. Does sandstone allow airflow? Yes. The cut-out openings can allow airflow and filtered light, depending on the pattern.

Q4. Can it be installed outdoors? It may be suitable for outdoor use when the stone grade, design, fixing system, and local conditions are appropriate.

Note: This is a general product brochure. Please confirm exact dimensions, pattern, stone grade, finish, quantity, installation requirements, and pricing with the supplier before ordering.
