

# Pilger Die Product Catalog

Pilger Die is a precision-engineered industrial component widely used in tube rolling and metal forming applications. Manufactured using premium quality steel and advanced die casting technology, this product ensures superior durability, dimensional accuracy, and long operational life. The die is designed for high-performance industrial operations such as stamping, threading, punching, and bending. Its polished silver finish provides excellent resistance against corrosion and wear. Pilger Dies are ideal for heavy-duty production environments and are known for reliable performance, consistent output quality, and easy installation in pilger mill machines.

| Specification    | Details                                |
|------------------|--|
| Product Name     | Pilger Die                             |
| Usage            | Industrial                             |
| Material         | Steel                                  |
| Shaping Mode     | Die Casting                            |
| Color            | Silver                                 |
| Size             | Standard                               |
| Working Process  | Punching, Stamping, Threading, Bending |
| Surface Finish   | Polished                               |
| Application      | Tube Rolling & Metal Forming           |
| Supply Ability   | 100 Pieces Per Month                   |
| Delivery Time    | 2-10 Days                              |
| Sample Available | Yes                                    |
| Main Market      | All India & Export Markets             |
