DESCRIPTION:
Fosroc Conplast Crystalline is a crystalline based internal waterproofing adhesive. It is used for waterproofing concrete structures. It is applied to the surface of the concrete and penetrates into the pores of the concrete, forming a crystalline structure that blocks the pores and prevents the passage of water.

Usage:
Fosroc Conplast Crystalline is used for waterproofing concrete structures. It is applied to the surface of the concrete and penetrates into the pores of the concrete, forming a crystalline structure that blocks the pores and prevents the passage of water.

Preparation:
Fosroc Conplast Crystalline is prepared by mixing the product with water. The mixture is then applied to the surface of the concrete and penetrates into the pores of the concrete, forming a crystalline structure that blocks the pores and prevents the passage of water.

Storage:
Fosroc Conplast Crystalline should be stored in a cool, dry place. It should be protected from moisture and sunlight. The container should be kept closed when not in use.
