About Us

Fertilizers and pesticides are a crucial part of agriculture sector which provides essential nutrients to crops and protects them from pests & diseases. However, during the last 50 years, the usage of chemical fertilizers and synthetic pesticides has increased which has led to several major problems. Some of these issues are contamination of soil, food, ground water, lakes, oceans, rivers, air, etc. with harmful residues, adverse effects on non-target insects & other living organisms as well as increased number of resistant pest species causing pest resurgence. Further, the mishandling of toxic synthetic products may lead to lethal and non-lethal accidents.

Looking at the requirement of techno-commercial guidance and expertise, Samarth Herbotech (India) Private Limited was established to provide services to new entrants in herbal industry. As part of the turnkey project consultancy line of business, the company provides services from concept to commissioning for processing units to manufacture value added products, including marketing of medicinal herbs and their value added products. There are several experts in the sector that vouch for our excellence in the global marketplace. We have earned their trust by constantly formulating the finest products and services. Over the years, as a proud manufacturer and exporter, we have succeeded owing to our quality which remains unrivalled to this date.
