About Us

Eloise Engineers Private Limited is committed to providing excellence in engineering, design, and material handling solutions as a manufacturer, service provider, and supplier. With a strong foothold in industrial-grade fabrication and crane system components, the organization is famous for its solid engineering designed for heavy-duty operations. These comprise a precision-engineered load block crosshead, equalizer pulley, weight socket, transfer trolley, idle side CT wheel, lever type limit switch, and rope drum, all designed for uninterrupted load handling and better durability.

All of these are designed for a purpose, to improve operating reliability and deliver maximum performance under the harshest industrial conditions. From designing maximum capacity to outfitting state-of-the-art safety features, every product is built for durability, accuracy, and adaptability in multiple crane systems. Business owners across industries rely on Eloise with its low-maintenance philosophies that ensure relentless workflow and on-site technical support that guarantees smooth project completion from start to finish. The company also offers EOT crane project design services and crane division services, led by industry specialists who bring innovation to every stage of design, manufacturing, and installation. From handling complex retrofit projects to designing entirely customized configurations, Eloise is proficient in solving unique material handling problems with competency and promptness.
