

Inclined Belt Conveyor

Product Description: The Inclined Belt Conveyor is an industrial material-handling equipment designed to efficiently transport materials from one level to another. It features a sturdy MS structure, durable conveyor belt, and an inclined design suitable for continuous material movement in industrial and warehouse applications.

Key Features: High-quality construction, blue paint-coated MS frame, inclined conveyor design, electric power operation, and reliable performance for industrial material handling.

Typical Applications: Suitable for factories, warehouses, production lines, packaging units, and other industrial environments where materials need to be conveyed between different heights.
