Note:

1. Specifications are subject to change as we continuously improve product design, materials, and performance to enhance durability, functionality, and overall quality.
2. Slight color variations may occur from dye to dye lot due to the natural characteristics of textile production. These variations do not affect the quality or performance of the product.
3. Shading or pile reversal is an inherent characteristic of carpets caused by light reflection on fibers due to usage and natural changes in pile direction. This is a normal occurrence and should not be considered a manufacturing defect.
