Dear Sir, We are a manufacturer of PET (Polyester) Strap, which is mostly used in pallet packing and cotton or fiber pressing application. PET (Polyester) Strapping is best used for rigid loads and helps to absorb impact during transit. It's also a better alternative when you need higher initial tension to contain loads when compared to PP (Poly Propylene) strapping. PET strap is made from 100 percent recycled material. These straps are temperature-stable and guarantee high strength and elasticity for optimally securing loads. PET straps are used in an extremely diverse range of industries.

They are used for strapping, -Metals-Lumber-Pallets of Bottles and Cans-Bricks-Tiles- Yarns Excellent for stabilizing and pelletizing heavy loads Our manufacturing capacity of Pet strap has been approximately 1500 tons yearly Offering high quality products has always been UV POLYMERS priority. We ensure high quality products by conducting strict quality control. We perform tests on width, thickness, tensile strength, flatness, straightness, etc. In addition to our products, UV Polymers also conduct strict quality checks on raw materials. The testing is done by various advanced equipment such as Tensile Testing Machine, etc.
