

GPT-1325M CNC Heavy Duty Router Machine

The GPT-1325M CNC Heavy Duty Router Machine is a high-performance industrial routing solution designed for precision cutting, engraving, carving, drilling, and milling operations. Constructed with a robust heavy-duty steel frame, the machine delivers exceptional stability, accuracy, and durability during continuous operation. It is widely used in woodworking, furniture manufacturing, acrylic processing, signage production, MDF cutting, PVC sheet machining, and decorative panel fabrication. Equipped with advanced motion control technology and a powerful spindle system, the GPT-1325M ensures smooth operation, high productivity, and superior finish quality. Its large working area and reliable performance make it an ideal choice for workshops and manufacturing facilities seeking efficient and cost-effective CNC machining solutions.
