# Industrial Battery Scrap

## Product Description

Industrial Battery Scrap consists of used, damaged, or end-of-life batteries collected from industrial, commercial, automotive, or backup-power applications. The scrap shown includes assorted battery units that may contain recoverable materials such as lead, plastic, and other components, depending on battery type.

## Key Features

- Suitable for collection, sorting, and recycling through authorized facilities
- Material composition and recovery value depend on battery chemistry and condition
- May be sourced from industrial equipment, vehicles, and backup power systems
- Bulk lots should be inspected and graded before purchase or processing

## Handling and Safety

Used batteries may contain corrosive electrolytes, lead, or other hazardous materials. Store them upright in a secure, covered area, prevent leaks and short circuits, and avoid dismantling or handling damaged units without appropriate training and protective equipment. Send them to an authorized battery recycler in accordance with local rules.
