Industrial Metal Scrap

Product Description

Industrial Metal Scrap consists of discarded or surplus metal components, including steel sections, plates, and other ferrous metal parts collected from industrial operations, fabrication units, machinery dismantling, and metalworking activities. It can be sorted and processed for recycling and reuse in metal production, subject to material grade and condition.

Key Features

- Suitable for recycling and metal recovery
- May include mixed steel and other ferrous metal pieces
- Applicable for scrap yards, foundries, and metal recycling facilities
- Sorting and grading can be carried out according to buyer requirements

Handling Note

Material composition, grade, dimensions, and cleanliness may vary by batch. Inspect and classify the scrap before processing or purchase.
