Pyrolysis Oil

Product Description: Pyrolysis Oil is a dark-colored liquid fuel produced through the thermal decomposition of carbon-based materials in the absence of oxygen. It is commonly used as an industrial fuel and can serve as a feedstock for further processing and energy applications. The product is typically stored in sealed containers or tanks and should be handled according to applicable safety and storage requirements.

Applications: Industrial heating, boilers and furnaces, thermal energy generation, and selected industrial fuel or processing applications, subject to product specifications and local regulatory requirements.
