

Calcium Chloride Anhydrous Powder

Product Description:

Calcium Chloride Anhydrous Powder is a white, hygroscopic inorganic compound widely used in industrial, chemical, food processing, and de-icing applications. It is highly soluble in water and known for its excellent moisture absorption properties. The anhydrous form provides high purity and fast dissolution, making it suitable for use in drying agents, refrigeration brines, dust control, and various manufacturing processes.

Property	Details
Product Name	Calcium Chloride Anhydrous Powder
Appearance	White Powder
Chemical Formula	CaCl_2
Solubility	Highly Soluble in Water
Application	Industrial, Chemical, Drying Agent, De-icing
