

Calcium Chloride Lumps

Description:

Calcium Chloride Lumps are white, solid inorganic compounds widely used in industrial, chemical, construction, food processing, and de-icing applications. These lumps are highly hygroscopic, meaning they readily absorb moisture from the air, making them effective as drying agents and desiccants. Calcium Chloride offers excellent solubility in water and is commonly used for dust control, refrigeration brines, concrete acceleration, and water treatment.

Property	Details
Appearance	White Lumps
Chemical Formula	CaCl_2
Solubility	Highly Soluble in Water

Nature	Hygroscopic
Applications	Industrial, Construction, De-icing, Drying Agent
