TIDC INDIA

**THE COMPLETE
CHAIN COMPANY**

TIDC Edge

Design & Engineering

The Engineering success of TIDC has always been a combination of the latest technology deployed and continuous innovations in existing products.

Greater Fatigue and Tensile strength

The plates in each and every TIDC chain undergo piercing operation to extremely accurate specifications. Followed by Shaving or Drifting to increase bearing area, guaranteeing greater dynamic strength and fatigue life.

Longer Wear Life

Roundness of the bushes and heat treatment of pins and bushes also impact wear life. At TIDC bushes are manufactured on a multi slide auto forming machine which produces them to uniform roundness. Edge beveling and meticulous sizing is also carried out for the bushes. A special purpose machine ensures perfect cropping of pins. All components are treated in a controlled atmosphere for outstanding endurance.

Maximum Working Load capability

Critical applications call for chains with a high working load capability, and for this plates, bushes and rollers are shot peened-constantly bombarded with hard metal pellets at high speeds.

Maximum Impact & Crushing Strength

High impact resistance of rollers is achieved by use of solid rollers which are cold extruded from wires. This enables the production of strong rollers with uniform wall thickness and excellent finish.

Assembly & Testing

Pre-lubrication is followed by precision assembly and proof loading. Rigorous testing is done under various loads and speeds to evaluate their performance and to compare them against Indian and international standards.

Quality & performance

Strict and complete adherence to constant quality and regular technology upgradation have ensure TIDC chains exceed all laid down parameters:

- Consistency in length control
- Higher than standard breaking loads
- Higher than standard fatigue limits
- Chain & Sprocket supply as a kit

A manufacturer with rare strengths

Over the years we have developed and fine tuned immense competencies in cold working of metals, metal joining processes, metal treatment processes and development of tools, jigs and fixtures to support manufacturing technology.

Our chains get the best treatment

Our team has rich experience in heat treatment to maximise strength and life in every chain element: pins, bushing, rollers and link plates.

We deploy our specialist skills in continuous hardening operations for martensitic heat treatment. Under a completely automated atmosphere we work with high, medium and low carbon steels, alloy steels, austenitic and martensitic stainless steels etc. Some of the other treatments we offer based on customer specification are:-

- Chain colorations –Ash, Straw, Blue Black, Brown etc. for aesthetic appeal, achieved through controlled atmosphere.
- Plates, rollers are shot peened after heat treatment thereby enhancing fatigue life. Based on application requirement we offer chromised pins that increase wear-life manifold.

The best certification are those that came from our clients

We are one of the world's few companies to be certified for API 7F specifications by the American Petroleum Institute for oil field chains. Our manufacturing processes right from product design to testing of finished chains conform to ISO 9000:2000 standards and are certified by RWTUV of Germany. Our Motorcycle Engine Mechanism Chain and Fine Blanking Divisions are certified to TS 16949 standards by Underwriters Laboratories, USA. But what gives us the most pride is, the approval and repeat orders that come to us from our clients all over India & across the world.

Demand Quality.....Demand Diamond

Perfect chain sprocket interaction is critical for smooth & trouble free operation of Power transmission system. This is the most critical part in driving success to a Power transmission process. Demand quality in making a drive system a highly successful one by Demanding Diamond brand.

We provide the best of the sprockets to go with the best chains for the drive system. The sprockets are designed and manufactured to meet high quality standards which will maximize the overall system efficiency. A perfect Diamond chain & sprocket articulation will give a longer service life for both chain as well as sprockets, thus ensuring cost reduction. This means

- Reduced down time
- Reduced maintenance costs
- Increased productivity

The Diamond Edge

- Diamond Sprockets are specifically designed and manufactured to suit our chain's stringent tolerance levels.
- Superior quality medium carbon and alloy steels are used for better strength and wear resistance properties.
- The teeth are generated through Hobbing and Milling process.
- The blanks for sprocket are produced through Forging and or machined using CNC machines.
- The Bore of the sprockets is finished to closer tolerances and smoother surface finish by Boring operation.
- Key ways in paired sprockets are produced by milling operation in a single stroke for better accuracy and alignment.
- Sprocket Tooth profiles are made as per standard ISO 606/ANSI B29.1.

Wrap Testing

- 100% of the sprockets are subjected to wrap test with the corresponding chain for checking the fitment between chain and sprocket.
- Wrap test ensures correctness of P.C.D and Root Diameter which are critical for fitment at site.

Hardening of Sprockets

- Sprockets and Traction wheels, the working portion will be Induction Hardened to higher case depth for better wear resistance based on request.
- The tooth portion where the chain roller engages will be hardened to resist abrasion.
- This enhances the working life of the sprocket / traction wheel.

Paired Sprockets

- In paired sprockets, the key way alignments are checked and the straightness of the teeth ensured during inspection.
- This facilitates easy assembly of sprockets in to the shafts at site.

Our Sprocket Range

Diamond sprockets are available across wide pitch groups and tooth counts.

Our sprockets comply with the British Standards and with Pilot bore with Type B.

Pitch: $\frac{3}{8}$ " to $1\frac{1}{2}$ "

Tooth: 9 to 76

Strand: Simplex, Duplex, Triplex

Dual Sprockets are also made as enclosed.

We also supply Sprockets for specific applications based on request.

We have application engineers who can serve on Customised requirements.
