

GPS Vehicle Tracker

Product Description

The GPS Vehicle Tracker is a compact and practical vehicle monitoring device designed for real time location tracking and fleet security. Its slim body and integrated connector make it suitable for installation in compatible vehicles. The device helps users monitor vehicle location, movement and travel activity through a connected tracking platform.

Key Features

Feature	Description
Real Time Tracking	Monitor vehicle location and movement through a tracking platform.
Route History	Review previous travel routes and vehicle movement records.
Geo Fencing	Set virtual geographic boundaries and receive alerts when the vehicle enters or leaves them.
Multiple Alerts	Supports configurable notifications for important vehicle activity.
Compact Design	Slim and lightweight design for convenient vehicle installation.
LED Indicators	Status indicators help show device operating conditions.
Vehicle Monitoring	Useful for personal vehicles, commercial vehicles and fleet management.

Applications

Suitable for private cars, company vehicles, taxi and rental fleets, logistics vehicles, delivery vehicles and general fleet monitoring applications. It can help businesses improve vehicle visibility, route management and operational control.

Product Highlights

Compact GPS vehicle tracking solution with real time monitoring, route history, geo fencing and alert support. The product images show the tracker from multiple angles, its connector, packaging and typical vehicle tracking use.
