

# Non-Woven DTM Interlining

## Product Description

Non-Woven DTM Interlining is a versatile textile support material widely used in garment manufacturing and apparel applications. It provides enhanced structure, durability, and dimensional stability to fabrics while maintaining a lightweight and flexible feel. The material is suitable for collars, cuffs, plackets, waistbands, and other garment components that require reinforcement. Manufactured using high-quality non-woven fibers, it offers excellent adhesion, smooth finishing, and consistent performance.

## Key Features

- Available in multiple colors and roll sizes.
- Lightweight and easy to handle.
- Provides excellent fabric support and shape retention.
- Smooth surface finish with uniform thickness.
- Suitable for industrial and commercial garment production.
- Durable, flexible, and easy to store.

## Applications

Garment manufacturing, fashion accessories, tailoring units, textile industries, and apparel production facilities.

## Packaging

Supplied in roll form for convenient transportation and storage.
