Our Products

Ammonium Persulfate :-

Ammonium persulfate (APS), a stable salt of peroxodisulfuric acid, is a strong, efficiently dosed oxidising agent and an excellent free radical generator in aqueous media.

Applications :-

Industrial

Pharmaceuticals

Polymers

Dyes & Textile

Oil & Gas

Potassium Persulfate :-

Potassium Persulphate is used in organic chemistry as an oxidizing agent. It is used in active pharma manufacturing, hair bleaching, wool bleaching, chemical synthesis and accelerated curing of low formaldehyde adhesives.

Applications :-

Industrial

Pharmaceuticals

Polymers

Dyes & Textile

Electronics

Hair Care

Sodium Persulfate :-

Sodium persulfate (SPS), a stable salt of peroxodisulfuric acid, is a strong yet easy-to-dose oxidant and an excellent radical source in aqueous media.

Applications :-

Mining

Pharmaceuticals

Polymers

Dyes & Textile

Electronics

Hair Care

Applications :-

Metal Treatment:- Ammonium Persulfate And Sodium Persulfate are used for Treatment of Metal Surfaces to etch copper on Printed Circuit Boards, Manufacturing of Semiconductors , and Activation of Copper and Aluminium Surfaces

Textiles & Paper:- In Textile industry Persulfates can be used for Denim Desizing and Bleach Activators. They can also be used for cold bleaching In Paper Industry Persulfates can be used for re-pulping and de-inking

Water Treatment & Disinfectants:- Ammonium Persulfate is extensively used in Waste Water Treatment and Oxidative degradation of harmful substances. Persulfate also used for production of Disinfectants

Cosmetics:- In Cosmetics Industry Both Ammonium Persulfate & Potassium Persulfate are used extensively as boosters for hair bleaches and for oxidization of hair dyes. They are also used as key components for bleaching formulations.
