

SEW Eurodrive Industrial Drive Solution

SEW Eurodrive introduces a robust industrial drive solution designed for industrial automation, material handling, and conveyor applications. Constructed with durable aluminum alloy and finished in grey RAL 7031, the system supports power outputs ranging from 0.12 to 200 kW. Features include VFD-based automation, integrated microprocessor control, fan cooling, thermal overload protection, low noise operation below 70 dB(A), and IP55 protection.

Primary Competitive Advantages

- High efficiency and reliability
- German engineering quality
- Gear ratios up to 250:1
- Remote monitoring and control support
- Low maintenance and compact design

Logistics, Packaging & Delivery

Secure packaging, FOB shipment from major German ports, timely delivery schedules, and sample availability for evaluation.

FAQs

1. Fan cooling improves operational life and temperature management.
2. Ideal for industrial automation, conveyors, and material handling.
3. Manufactured in Germany and supplied globally.
4. Known for efficiency, low maintenance, and customization options.
5. Supports remote monitoring through Fieldbus and Ethernet connectivity.
