

Sanmotion RS1A01AAWA Servo Drive

The Sanmotion RS1A01AAWA is a high-performance servo drive designed for industrial automation and precision motion control applications. Equipped with a 400 W DSP processor, encoder feedback system, and RS-232C/RS-485 communication interfaces, it delivers reliable and efficient performance.

Key Features

- 400 W DSP processor control
- Incremental encoder feedback
- RS-232C and RS-485 communication
- Natural air cooling system
- Overload, overvoltage, and overheat protection
- Compact metal body with IP20 protection

Applications

Industrial automation, manufacturing systems, motion control equipment, and precision machinery.

Technical Highlights

- Output current: up to 1.6 A
- Load capacity: 1.0 Nm
- Maximum speed: 3000 rpm
- CE certified

Market & Delivery

Available through leading manufacturers and suppliers in Germany with competitive pricing and prompt global delivery.
