

Sick NT6-08028 Kontrast Sensor

The Sick NT6-08028 Kontrast Sensor is a high-performance industrial sensor designed for high-speed label detection and register mark sensing applications. Featuring response times below 50 μ s and switching frequencies up to 10 kHz, it delivers outstanding accuracy and reliability.

Competitive Advantages

- Fast response time and high switching frequency
 - Integrated teach-in calibration function
 - Robust ABS and metal housing
 - IP67 protection rating
 - Suitable for packaging machinery up to 12 m/s
- ## **Applications**
- Label detection systems
 - Packaging machinery
 - Register mark sensing
 - Automated industrial production lines

Delivery & Packaging

Products are shipped promptly across India with secure packaging options to ensure safe delivery and seamless integration into industrial operations.

Key Benefits

Reliable performance, easy setup, durable construction, and flexible mounting options.
